1. Introduction

Biological species recording is largely undertaken by committed naturalists on a voluntary basis and on land with public access. Recording is much more rarely undertaken for planning and development purposes, or such data subsequently provided to centralised biological recording specialists, the County Recorders. Desk studies can therefore only ever provide guidance on what is already known about the species recorded in an area, and absence of species records for a search area does not mean they may not occur. For any site with potential nature conservation significance a full ecological site appraisal should be undertaken and species surveys carried out to complement the information contained in this report.

Copyrights

Ownership of the data used in this report remains with the original recorder, Essex Field Club and the Essex Recorders partnership. Copyright of this report remains the property of the Essex Recorders partnership and reproduction is strictly prohibited, except as part of a desk study or to support a planning application, when the data use restrictions must be included.

All site boundaries have been mapped using Ordnance Survey OS OpenData subject to the OS OpenData Licence. Persons viewing this material should contact Ordnance Survey for advice if they wish to licence Ordnance Survey data for their own use.

Data accuracy

The Essex Recorders partnership does not guarantee the accuracy of any information supplied and shall have no liability for any loss, damage or expense incurred as the result of reliance on any information supplied.

The Essex Recorders partnership can only provide information based on the data held by us. In particular, the absence of records for a species does not necessarily indicate that the species itself is absent, merely that it not been recorded, that we have not received records for it or the data are unavailable in suitable format at this time.

Access and use of data

The data provided in this report must not be added to a permanent database without the prior permission of the Essex Recorders partnership or copyright holder. Resale or transfer to third parties is strictly prohibited.

When information in this report is used in a desk study or Environmental Statement to support a planning application, then the report must be put into the public domain and provided in full in the searchable pdf format in which it is supplied and not changed or redacted. Data must not be used without inclusion of the data use restrictions. This is a stipulation to enable full transparency in the planning and consultation process for the planning authority, consultees and the public.

When publishing information derived from these data, the Essex Field Club, Essex Recorders partnership and any other copyright holders and the date of receipt must be acknowledged.

The data held by the Essex Recorders partnership is updated regularly and will become out-of-date. If you intend to use this data after a period of six months please contact us to confirm that we have no new records.

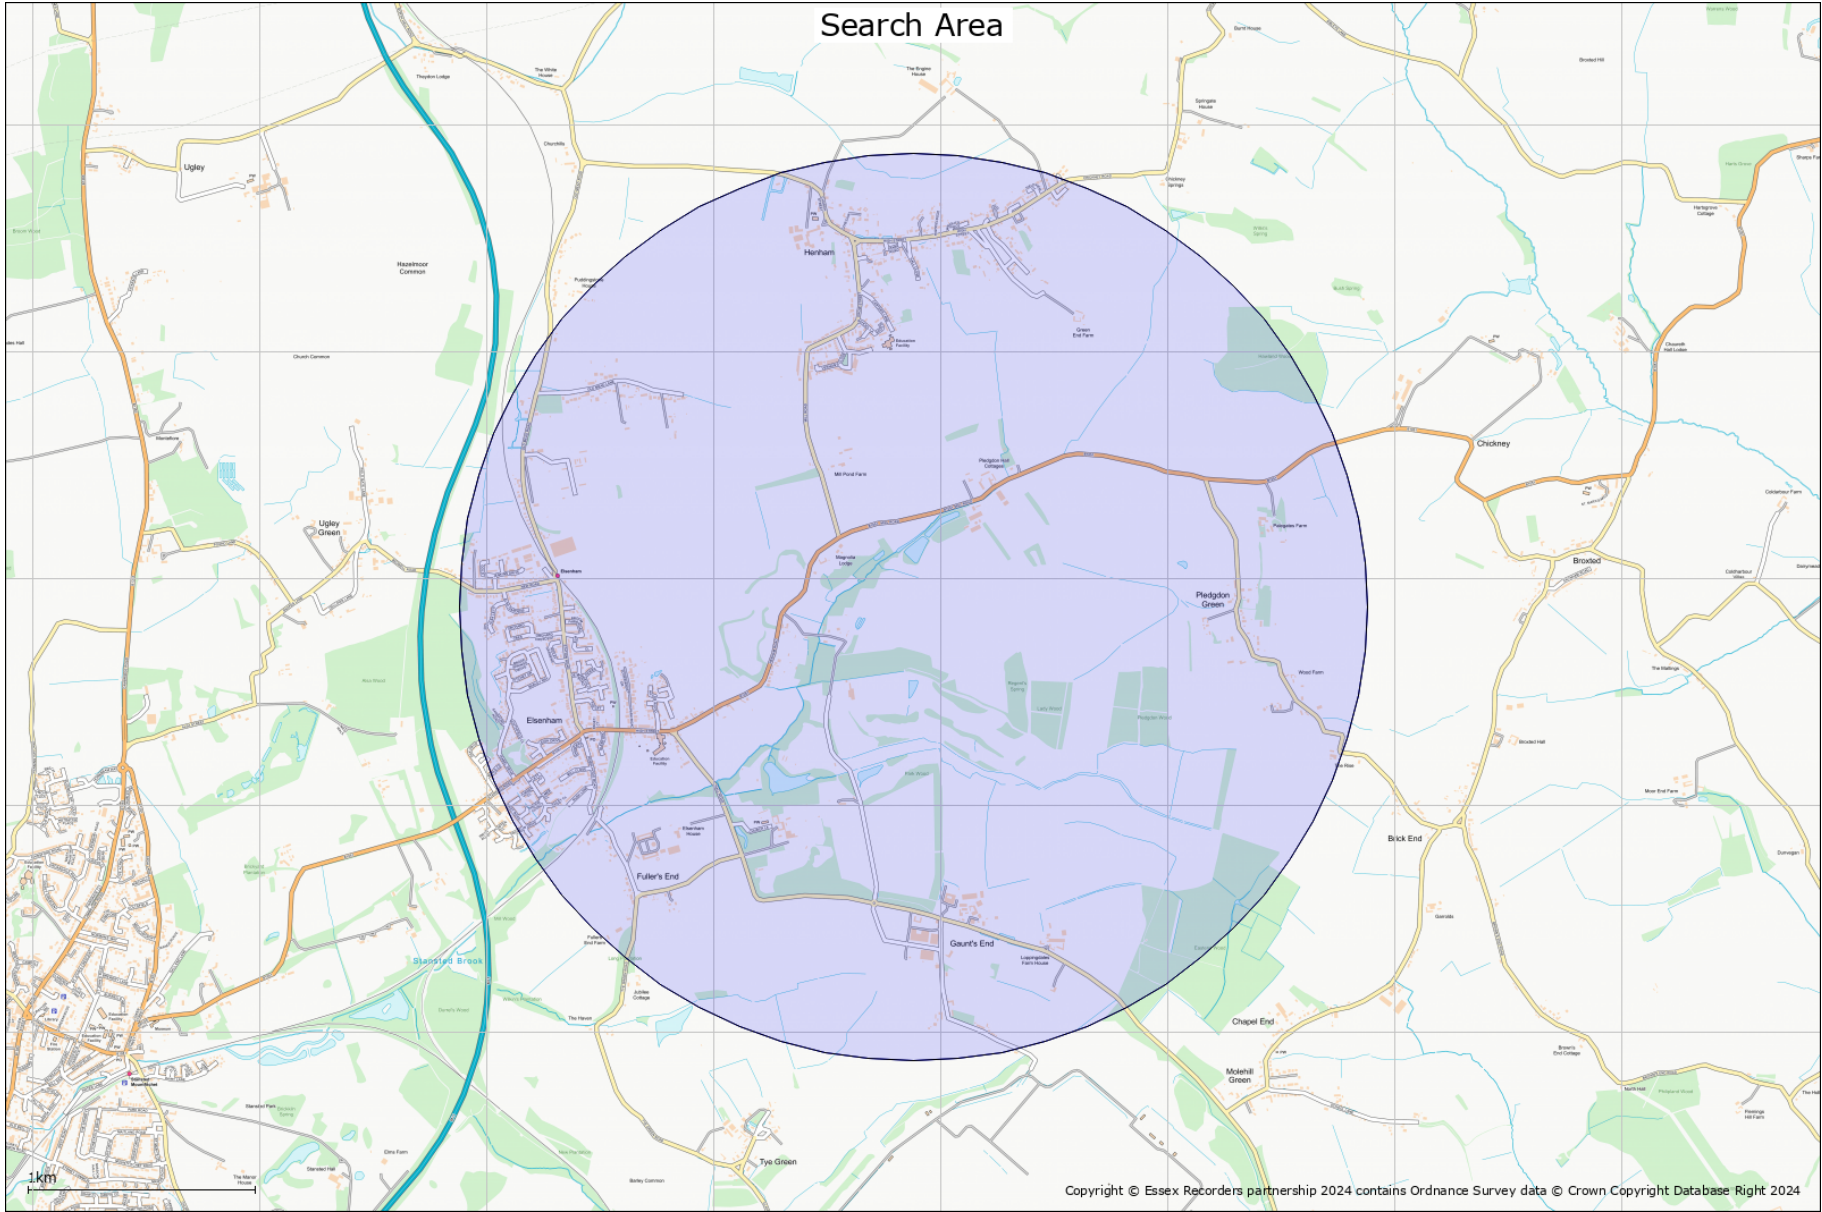

Designations

Except for Essex designations included in the Essex Biodiversity Action Plan or Essex Red Data List, or where otherwise indicated, designations used in this report are derived from the Joint Nature Conservation Committee (JNCC) Master list regardless of the status of the species in the county.

2. Data available through the Essex Recorders partnership

This report provides access to the following species datasets:

Data Provider	Species Group	County Coverage
EFC/Essex Amphibian & Reptile Group	amphibians and reptiles	County data
Essex Field Club	honey bee and bumblebees	Countywide data
Essex Field Club	bees and wasps	County data
Essex Field Club	ants	County data
Essex Field Club	beetles	Available county data
Essex Field Club	centipedes and millipedes	County data

Essex Birdwatching Society	birds, with Birdtrack data	County data

Sections on site designations

The following sections provide data on site designations in relation to the datasearch request search area. For statutory designated conservation sites, these are provided on maps expanded to cover a 5km radius.

3. All of a Buzz in the Thames Gateway

No All of a Buzz in the Thames Gateway sites are identified in relation to the search area

4. Nature Improvement Areas (NIAs)

See www.naturalengland.org.uk/ourwork/conservation/biodiversity/funding/nia/default.aspx

Nature Improvement Areas (NIAs) were introduced by the Government's Natural Environment White Paper to 'enhance and reconnect nature on a significant scale' in England.

Nature Improvement Areas encompass areas of land that include natural features and wildlife habitats but also include roads, housing developments and other man-made elements. They are areas that have been identified for their opportunities to restore nature at a landscape-scale alongside other land-uses.

These areas will become much better places for wildlife – creating more and better-connected habitats at a landscape scale, providing space for wildlife to thrive and adapt to climate change.

They will help people as well as wildlife – through enhancing a wide range of benefits that nature provides, such as recreation opportunities, flood protection, cleaner water and carbon storage.

NIAs should enhance existing ecological networks by:

- Increasing the number of wildlife sites
- Increasing the size of existing wildlife sites
- Improving connectivity between sites
- Creating wildlife corridors
- Improving the management of existing wildlife sites

The twelve initial NIAs extend from Morecambe Bay in the North West to the Wild Purbeck in the South West. One affecting Essex is the Greater Thames Marshes NIA in the south of the county.

No Nature Improvements Areas are identified near the search area

5. B-Lines network

Map shows routes within the B-Lines network, identified by Buglife and a wide range of conservation and landowner partners. B-Lines aims to coordinate the delivery of wildflower-rich habitats to aid pollinator movement across the landscape. For more information visit www.buglife.org.uk/b-lines

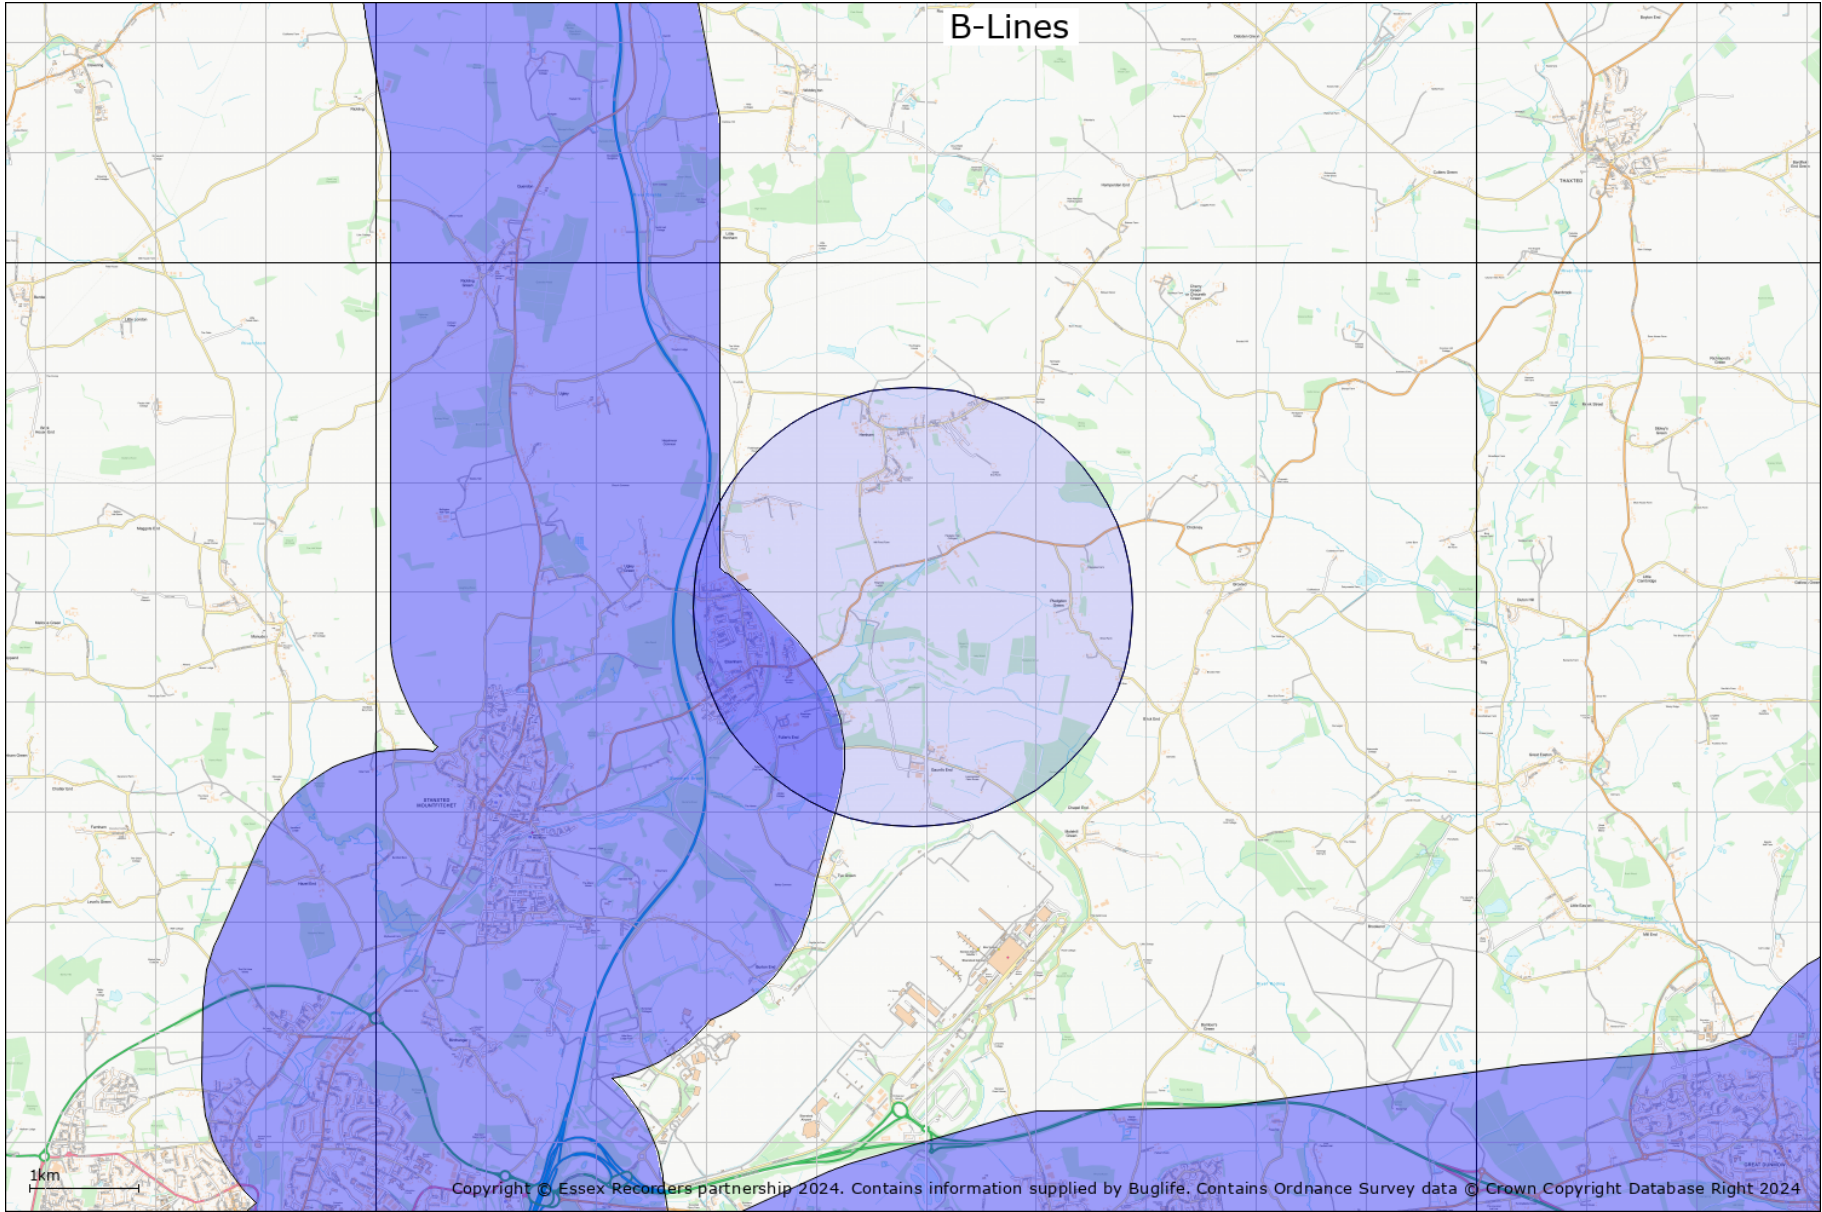

B-Lines is a landscape scale initiative to enhance declining pollinator populations by connecting up the best remaining wildflower-rich habitats through the creation or restoration of wildflower habitats. B-Lines was identified as a method to reverse pollinator declines in the National Pollinator Strategy's Implementation Plan, by aiding their movement across the fragmented landscape.

B-Lines are 3km corridors within which wildflower habitat restoration and creation can be focused and co-ordinated to maximise gains for pollinators. Habitat can be delivered by organisations, landowners, businesses, communities or individuals. Contribution to the B-Lines can be achieved through a variety of wildflower enhancement methods, such as habitat restoration (e.g. scrub clearance/re-introducing management/green haying), wildflower meadow creation in species poor grasslands, wildlife gardens, landowners entering agri-environment schemes, orchard planting, disturbance management and brownfield habitat creation, bee friendly formal planting, living roofs, etc.

Where relevant, planning applications in or around B-Lines should consider what they can contribute to the growing resources of pollinators in B-Lines. This will help to ensure that mitigation proposals align with ongoing work in the surrounding area for pollinators. It is important to note, however, that any planning applications should seek to protect and enhance the wildlife interests of all taxonomic groups and habitats, not pollinators and their requirements in isolation.

Buglife's online B-Lines hub includes an interactive map where habitat work can be uploaded to collate information on wildflower enhancements across the UK, as well as specific pollinator advice.

B-Lines identified in relation to the map area.

6. Special Areas of Conservation

© Natural England copyright. Contains Ordnance Survey data © Crown copyright and database right [2024]

A Special Area of Conservation (SAC) is an area which has been given special protection under the European Union's Habitats Directive. SACs provide increased protection to a variety of wild animals, plants and habitats and are a vital part of global efforts to conserve the world's biodiversity.

See www.naturalengland.org.uk/ourwork/conservation/designations/sac/

No Special Area/s of Conservation are identified in relation to the search area

7. Special Protection Areas

© Natural England copyright. Contains Ordnance Survey data © Crown copyright and database right [2024]

A Special Protection Area (SPA) is an area of land, water or sea which has been identified as being of international importance for the breeding, feeding, wintering or the migration of rare and vulnerable species of birds found within the European Union. SPAs are European designated sites, classified under the European Wild Birds Directive which affords them enhanced protection.

See www.naturalengland.org.uk/ourwork/conservation/designations/spa/

No Special Protection Area/s are identified in relation to the search area

8. Ramsar sites

© Natural England copyright. Contains Ordnance Survey data © Crown copyright and database right [2024]

Ramsar sites are wetlands of international importance, designated under the Ramsar Convention.

Wetlands are defined as areas of marsh, fen, peatland or water, whether natural or artificial, permanent or temporary, with water that is static or flowing, fresh, brackish or salt, including areas of marine water the depth of which at low tide does not exceed six metres.

Ramsar sites may also incorporate riparian (banks of a stream, river, pond or watercourse) and coastal zones adjacent to the wetlands, and islands or bodies of marine water deeper than six metres at low tide lying within the wetlands.

What is the Ramsar Convention?

The Ramsar Convention is an international agreement signed in Ramsar, Iran, in 1971, which provides for the conservation and good use of wetlands. The UK Government ratified the Convention and designated the first Ramsar sites in 1976.

See www.naturalengland.org.uk/ourwork/conservation/designations/ramsars/

No Ramsar Site/s are identified in relation to the search area

9. Marine Conservation Zone/s

© Natural England copyright. Contains Ordnance Survey data © Crown copyright and database right [2024]

Marine Conservation Zones (MCZs) are a type of Marine Protected Area. They protect areas that are important to conserving the diversity of nationally rare or threatened habitats and/or species and those places containing habitats and/or species that are representative of the biodiversity in our seas.

The Marine and Coastal Access Act 2009 (Part 5) enables Defra Ministers to designate and protect Marine Conservation Zones (MCZs). These are a type of marine protected area, which will exist alongside European marine sites [Special Areas of Conservation (SACs) and Special Protected Areas (SPAs)], SSSIs and Ramsar sites to form an ecologically coherent network of marine protected areas.

See <http://www.naturalengland.gov.uk/ourwork/marine/mpa/mcz/default.aspx>

No Marine Conservation Zone/s are identified in relation to the search area

10. National Nature Reserves

© Natural England copyright. Contains Ordnance Survey data © Crown copyright and database right [2024]

England's National Nature Reserves (NNRs) represent many of the finest wildlife and geological sites in the country. Our first NNRs emerged in the postwar years alongside the early National Parks, and have continued to grow since then.

Natural England is the body empowered to declare NNRs in England, the Reserves being a selection of the very best parts of England's Sites of Special Scientific Interest. It is this underlying designation which gives NNRs their strong legal protection. The majority also have European nature conservation designations.

Nearly every type of vegetation is found in England's NNRs, from coastal salt-marshes, dunes and cliffs to downlands, meadows and the subtle variations of our native woodlands. Scarce and threatened habitats such as chalk downs, lowland heaths and bogs and estuaries are conserved in NNRs.

Many NNRs contain nationally important populations of rare flowers, ferns and mosses, butterflies and other insects, and of course nesting and wintering birds. Examples include unique alpine plants at Upper Teesdale and the beautiful field of fritillary lilies at North Meadow, Cricklade, Wiltshire.

See www.naturalengland.org.uk/ourwork/conservation/designations/nnr/default.aspx

No National Nature Reserve/s are identified in relation to the search area

11. Sites of Special Scientific Interest

© Natural England copyright. Contains Ordnance Survey data © Crown copyright and database right [2024]

There are over 4,100 Sites of Special Scientific Interest (SSSIs) in England, covering around 7% of the country's land area. Over half of these sites, by area, are internationally important for their wildlife, and designated as Special Areas of Conservation (SACs), Special Protection Areas (SPAs) or Ramsar sites. Many SSSIs are also National Nature Reserves (NNRs) or Local Nature Reserves (LNRs).

SSSIs are the country's very best wildlife and geological sites. They include some of our most spectacular and beautiful habitats - large wetlands teeming with waders and waterfowl, winding chalk rivers, gorse and heather-clad heathlands, flower-rich meadows, windswept shingle beaches and remote uplands moorland and peat bog.

It is essential to preserve our remaining natural heritage for future generations. Wildlife and geological features are under pressure from development, pollution, climate change and unsustainable land management. SSSIs are important as they support plants and animals that find it more difficult to survive in the wider countryside. Protecting and managing SSSIs is a shared responsibility, and an investment for the benefit of future generations.

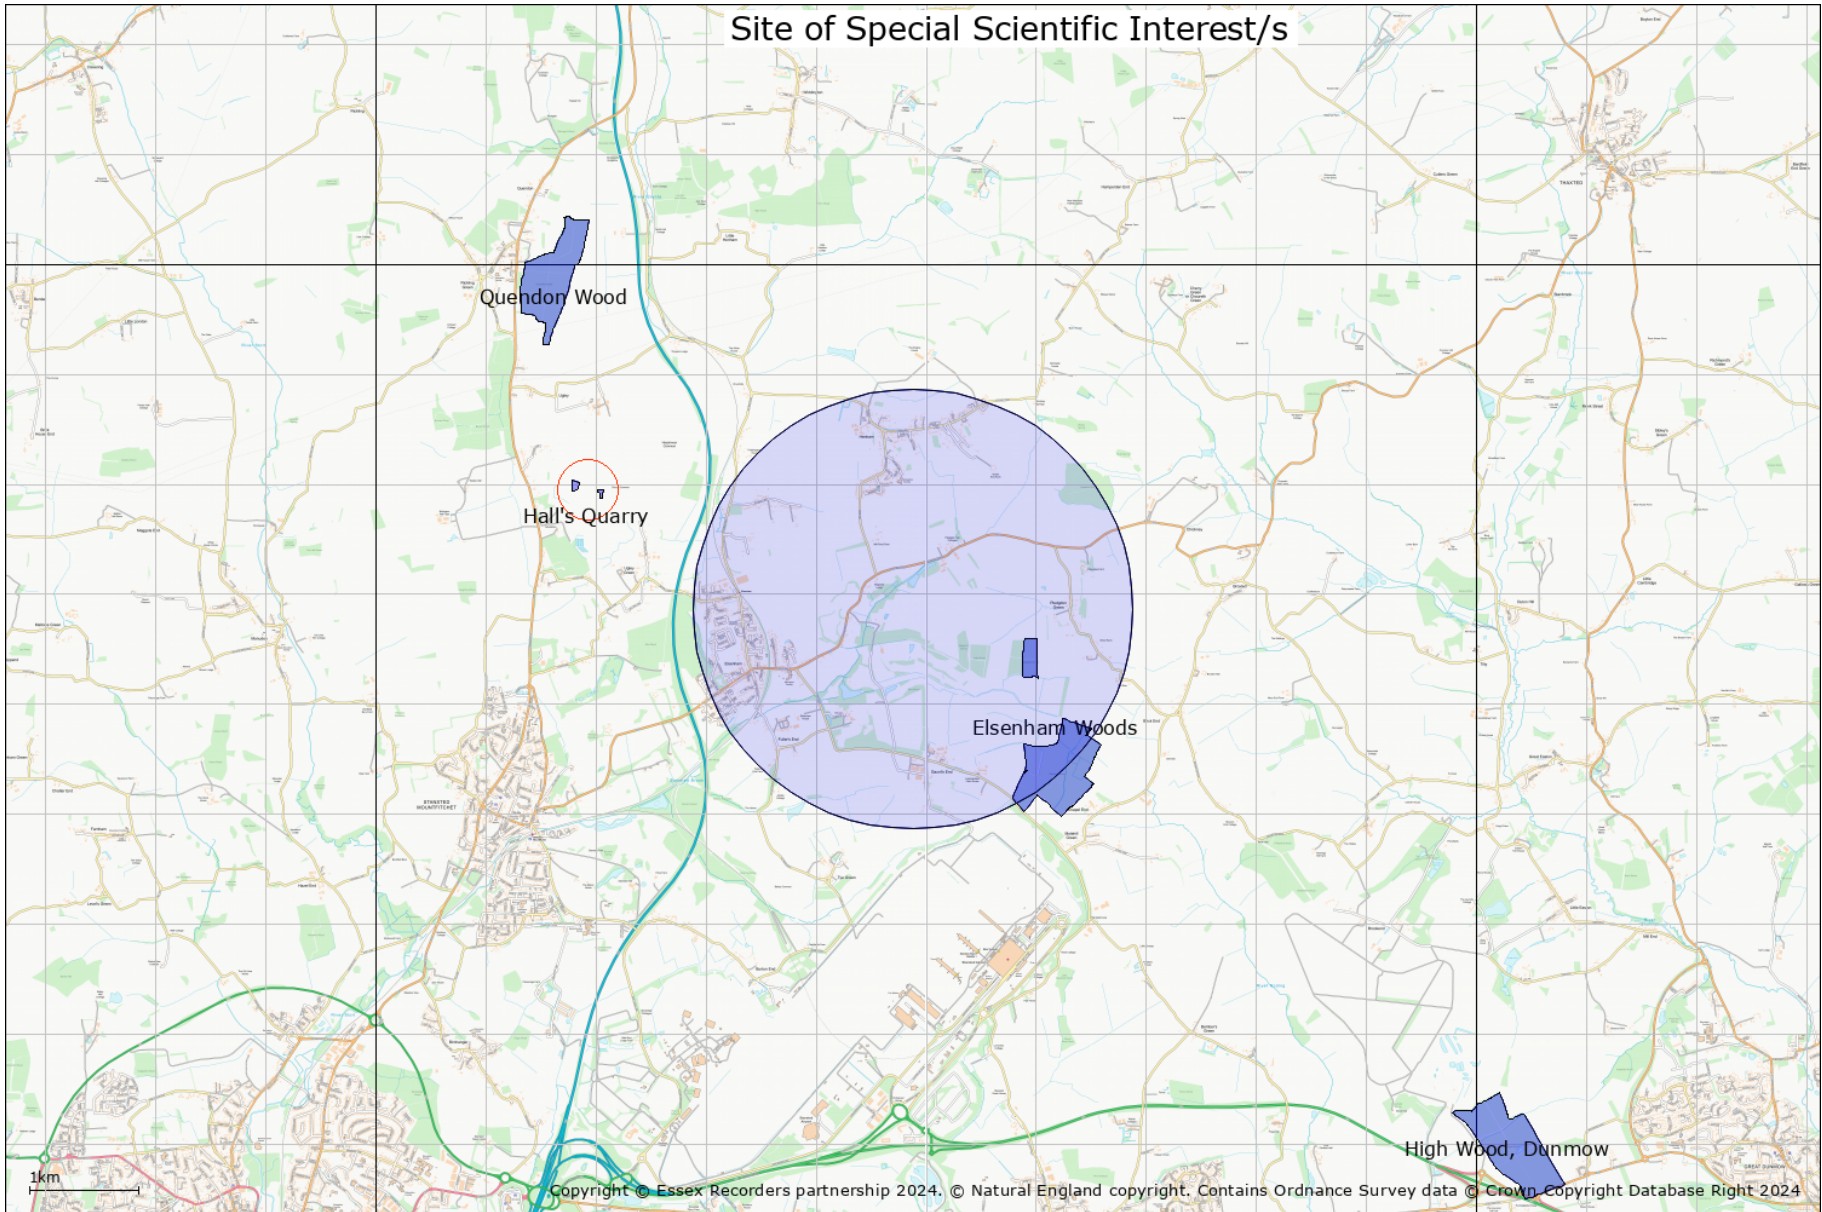

See www.sssi.naturalengland.org.uk/Special/sssi/index.cfm

Impact Risk Zones (IRZs) are a GIS tool developed by Natural England to make a rapid initial assessment of the potential risks posed by development proposals to: Sites of Special Scientific Interest (SSSIs), Special Areas of Conservation (SACs), Special Protection Areas (SPAs) and Ramsar sites. They define zones around each site which reflect the particular sensitivities of the features for which it is notified and indicate the types of development proposal which could potentially have adverse impacts. For information on SSSI Impact Risk Zones (IRZs) is available from Natural England

There are 4 Site of Special Scientific Interest/s identified in relation to the map area.

Elsenham Woods
Hall's Quarry
High Wood, Dunmow
Quendon Wood

Site of Special Scientific Interest/s

12. Areas of Outstanding Natural Beauty

AONBs are designated areas where protection is afforded to protect and manage the areas for visitors and local residents. Under the Countryside and Rights of Way Act 2000, Natural England has the power to designate areas of outstanding natural beauty (AONBs) in England that are outside national parks and that are considered to have such natural beauty it is desirable they are conserved and enhanced; issue a variation order to change an existing AONB boundary. It also holds a duty to give advice on developments taking place in an AONB; take into account the conservation and enhancement of AONBs in its work.

Two AONBs are relevant to Essex, the Dedham Vale AONB and the extended Suffolk Coast and Heaths Area of Outstanding Natural Beauty which sees the AONB expand by around 38 square kilometres, taking in a rich tapestry of attractive river valleys, ancient woodland, reed beds, wildlife-rich estuaries, and windswept beaches. The area includes the Stour estuary – one of the most important wildlife estuaries in Europe and of international importance for wildfowl and waders.

No Areas of Outstanding Natural Beauty are identified in relation to the search area

13. Local Nature Reserves

© Natural England copyright. Contains Ordnance Survey data © Crown copyright and database right [2024]. NB This national dataset is “indicative” not “definitive”. Definitive information can only be provided by individual local authorities and you should refer directly to their information for all purposes that require the most up to date and complete dataset.

Local Nature Reserve (or LNR) is a statutory designation made under Section 21 of the National Parks and Access to the Countryside Act 1949, and amended by Schedule 11 of the Natural Environment and Rural Communities Act 2006, by principal local authorities.

Local Nature Reserves (LNRs) are for both people and wildlife. They are places with wildlife or geological features that are of special interest locally. They offer people special opportunities to study or learn about nature or simply to enjoy it.

By declaring Local Nature Reserves (LNRs), local authorities can provide many benefits for both people and wildlife.

To:

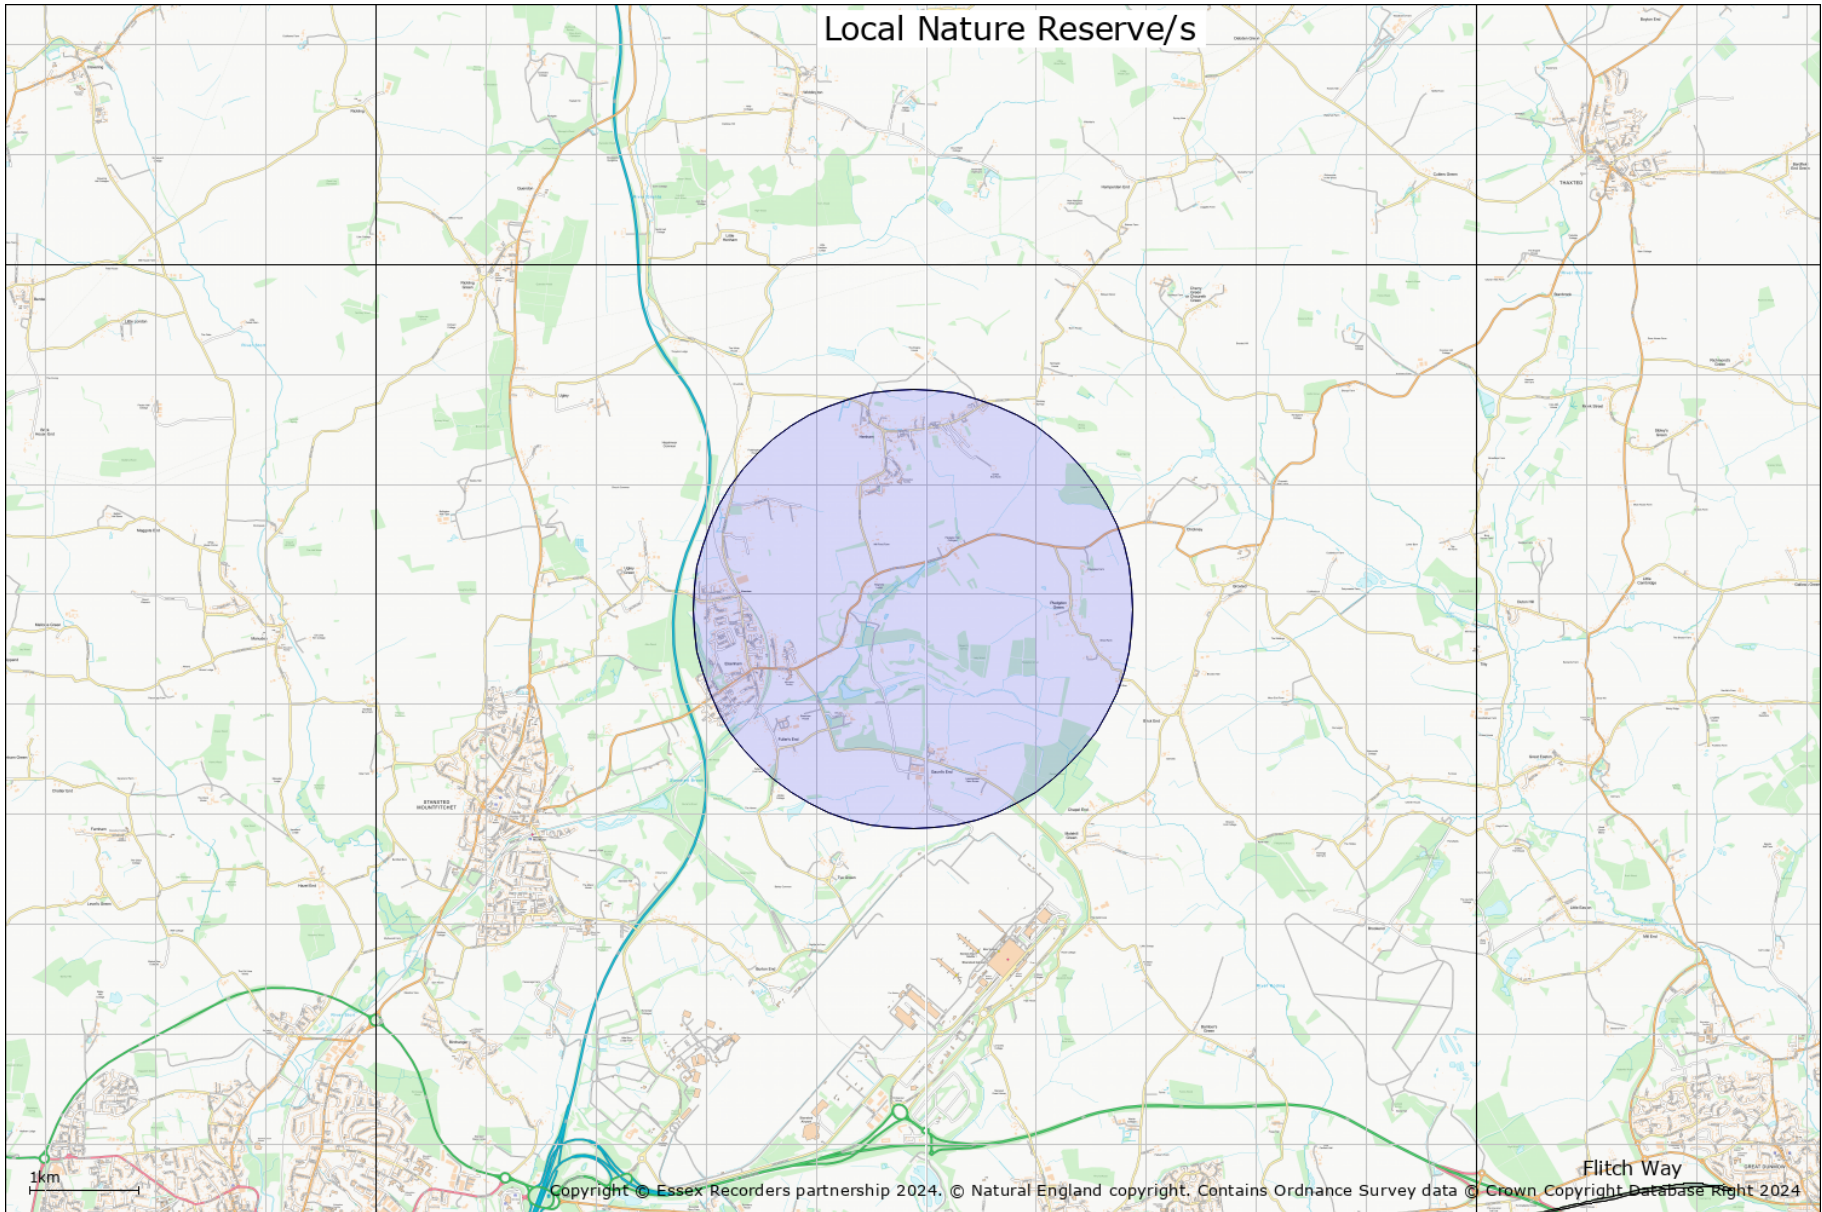

- increase people's awareness and enjoyment of their natural environment
- provide an ideal environment for everyone to learn about and study nature
- help to build relationships with national and local nature conservation organisations and local people protect wildlife habitats and natural features provide a great opportunity for people to become involved in managing their local environment offer a positive use for land which they would prefer was left undeveloped make it possible to apply bye-laws which can help in managing and protecting the site.

See www.naturalengland.org.uk/ourwork/conservation/designations/lnr/

There is 1 Local Nature Reserve/s identified in relation to the map area.

Bra33 Flitch Way

Local Nature Reserve/s

14. Essex Local Wildlife Sites (LOWS)

Local Wildlife Sites (LoWS), previously known as Sites of Importance for Nature Conservation (SINC) or County Wildlife Sites (CoWS), are areas of land with significant wildlife value. Local Wildlife Sites support both locally and nationally threatened wildlife, and many sites will contain habitats and species that are priorities under the Essex or UK Biodiversity Action Plans (BAP), which sets out strategies for the conservation of much of our most vulnerable wildlife.

Sites can be found throughout Essex and together with nationally and internationally statutory protected areas, such as Sites of Special Scientific Interest (SSSI) and Special Protection Areas (SPA), they represent the best areas for wildlife in the County. Local Wildlife Sites, together with statutory protected areas, are fundamental as they provide a vital contribution in maintaining the current levels of wildlife in Essex.

Local Wildlife Sites are protected within the local planning system. They are a 'material consideration' in the determination of planning applications, and this should ensure that there is a general presumption against development upon them.

See www.wildlifetrusts.org/local-wildlife-sites and

www.essexwt.org.uk/protecting-wildlife/landscape-conservation/local-wildlife-sites

Caveats and Potential Local Wildlife Sites (PLoWS)

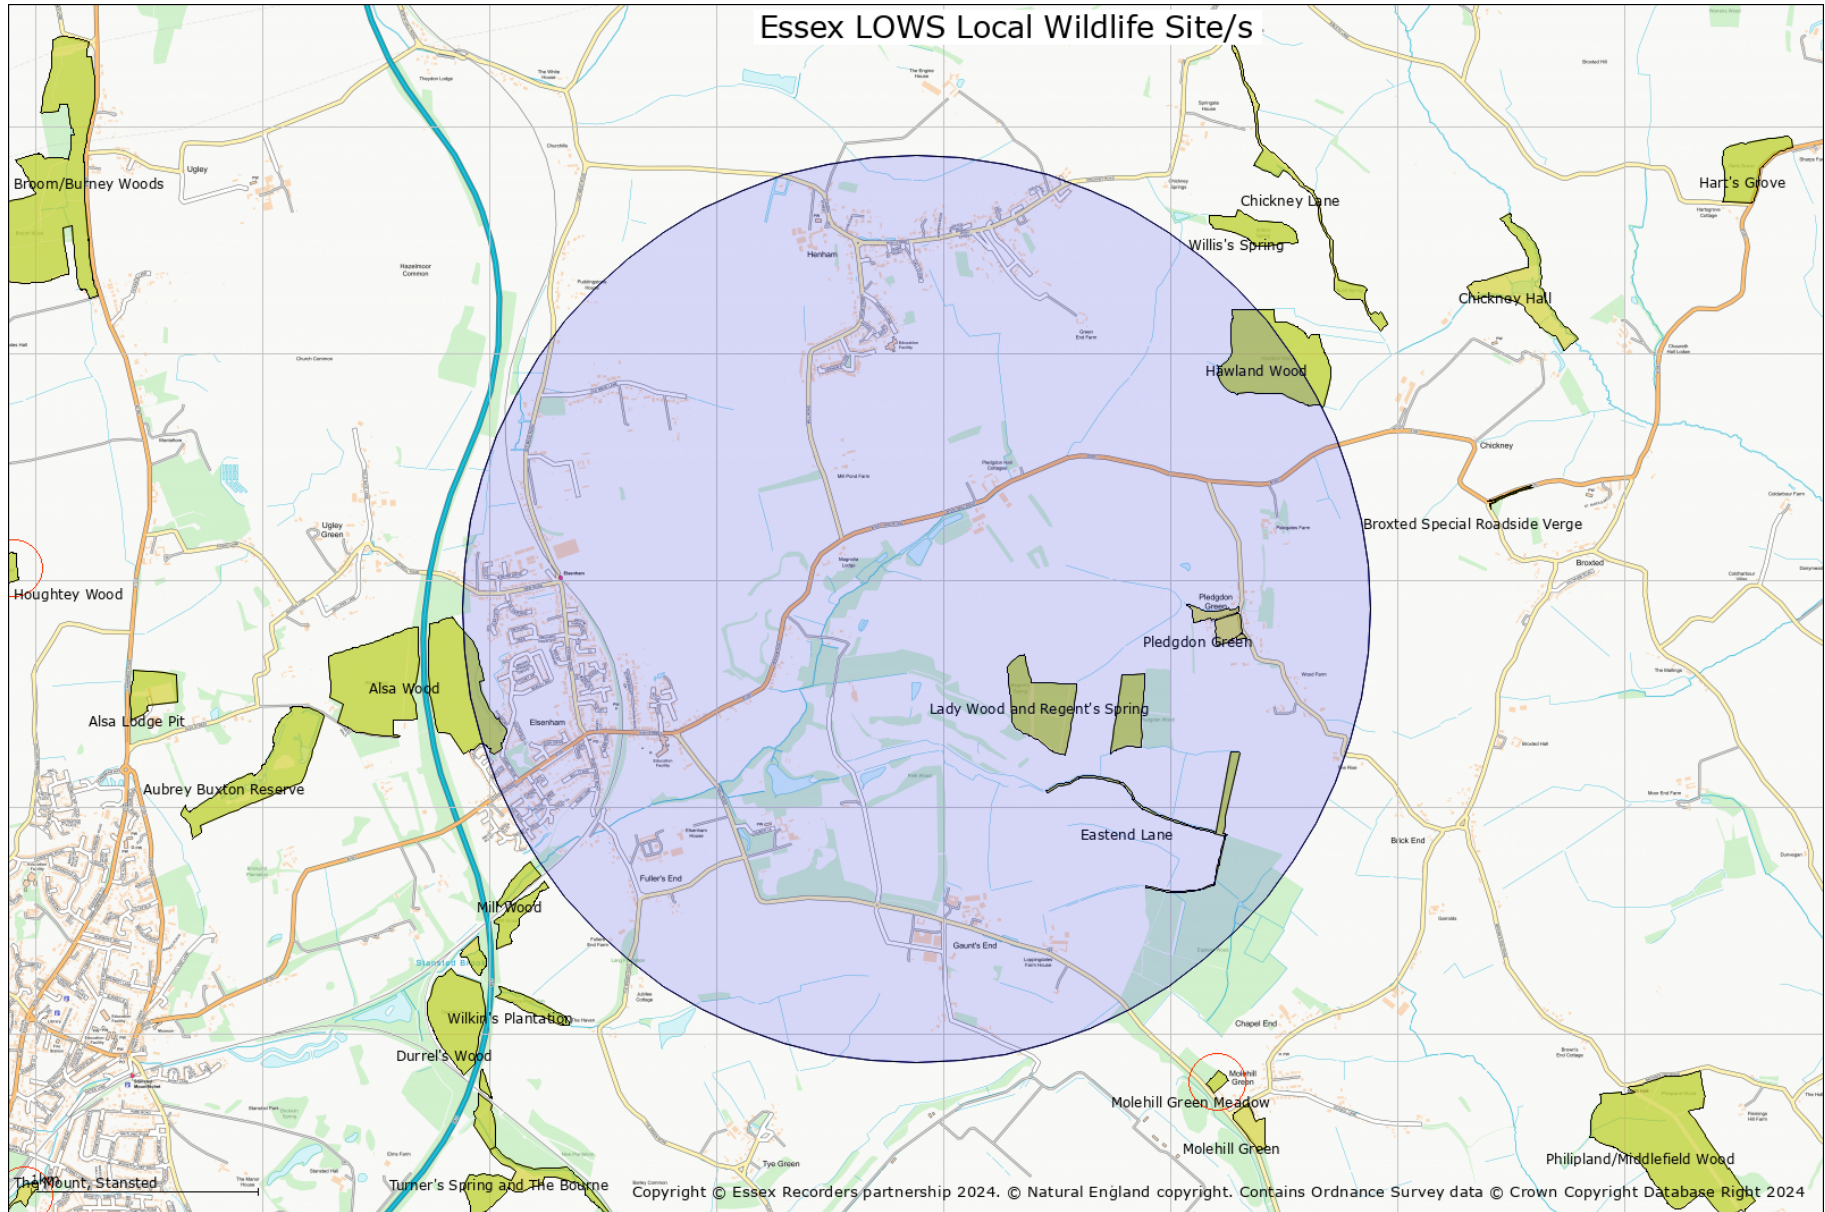

The LoWS reviews for Basildon, Castle Point and Rochford have yet to be confirmed and incorporated into their Constraints map.

Potential LoWS are currently only available here for some local authority areas. Sites identified as Potential LoWS are ones where there was reason to think that they may qualify as a LoWS during a published LoWS review, but there was insufficient information available to confirm this at the time. Ecological information supporting developments affecting an identified PLoWS should include a thorough assessment of the site against the Essex LoWS Selection Criteria.

There are 22 Essex LOWS Local Wildlife Site/s identified in relation to the map area.

(Yellow polygons are LoWS; Brown polygons are Potential LoWS). See Local Wildlife Site Citations pages at end of report for details.

Essex LOWS Local Wildlife Site/s

15. Country Park/s

Natural England recognises country parks as significant places that contribute to England's accessible natural greenspace.

Many are located near or within towns and cities and therefore close to where people live. All provide a wide range of opportunities for recreation, health and education and improve the quality of life for their local communities.

Country Parks were established as a result of the 1968 Countryside Act and there are currently more than 400 sites that call themselves Country Parks in England. They are visited by over 70 million visitors a year.

They are public green spaces often at the edge of urban areas which provide places to enjoy the outdoors and experience nature in an informal semi-rural park setting. Country Parks normally have some facilities such as a car park, toilets, perhaps a cafe or kiosk, paths and trails, and visitor information. There is not necessarily public right of access, although most are publicly accessible; some charge entry others do not.

See www.naturalengland.gov.uk/ourwork/enjoying/places/countryparks/default.aspx

No Country Park/s are identified in relation to the search area

16. Open Country and Common Land

Conclusive Map Data of Open Country:

Created under the Countryside and Rights of Way (CROW) Act 2000, the Open Country (OC) data was digitised from OS MasterMap by the contractors Black and Veatch Consulting Limited on behalf of the Countryside Agency. It consists of all land that appears to the Countryside Agency to consist wholly or predominantly of mountain, moor, heath and down and is not registered common land. It includes any modifications determined by the Planning Inspectorate as a result of appeals. It includes areas of land that are excepted from the rights of access as specified in Part 1 of Schedule 1 of the CROW Act. It may be amended for certain errors under current error regulations. The map must be reviewed not more than 10 years after its issue in conclusive form.

Conclusive Map Data of Registered Common Land:

Created under the CROW Act 2000, the Registered Common Land (RCL) data was digitised from DNF Landline by the contractors Geodata on behalf of the Countryside Agency. It is a digitised copy of land registered as common land under the Commons Registration Act 1965. It includes any modifications determined by the Planning Inspectorate as a result of appeals. It includes areas of land that are excepted from the rights of access as specified in Part 1 of Schedule 1 of the CROW Act. It may be amended for certain errors under current error regulations. The map must be reviewed not more than 10 years after its issue in conclusive form.

Important Notes:

There is no right of access to land shown as OC or RCL until the relevant Commencement Order for the area becomes effective.

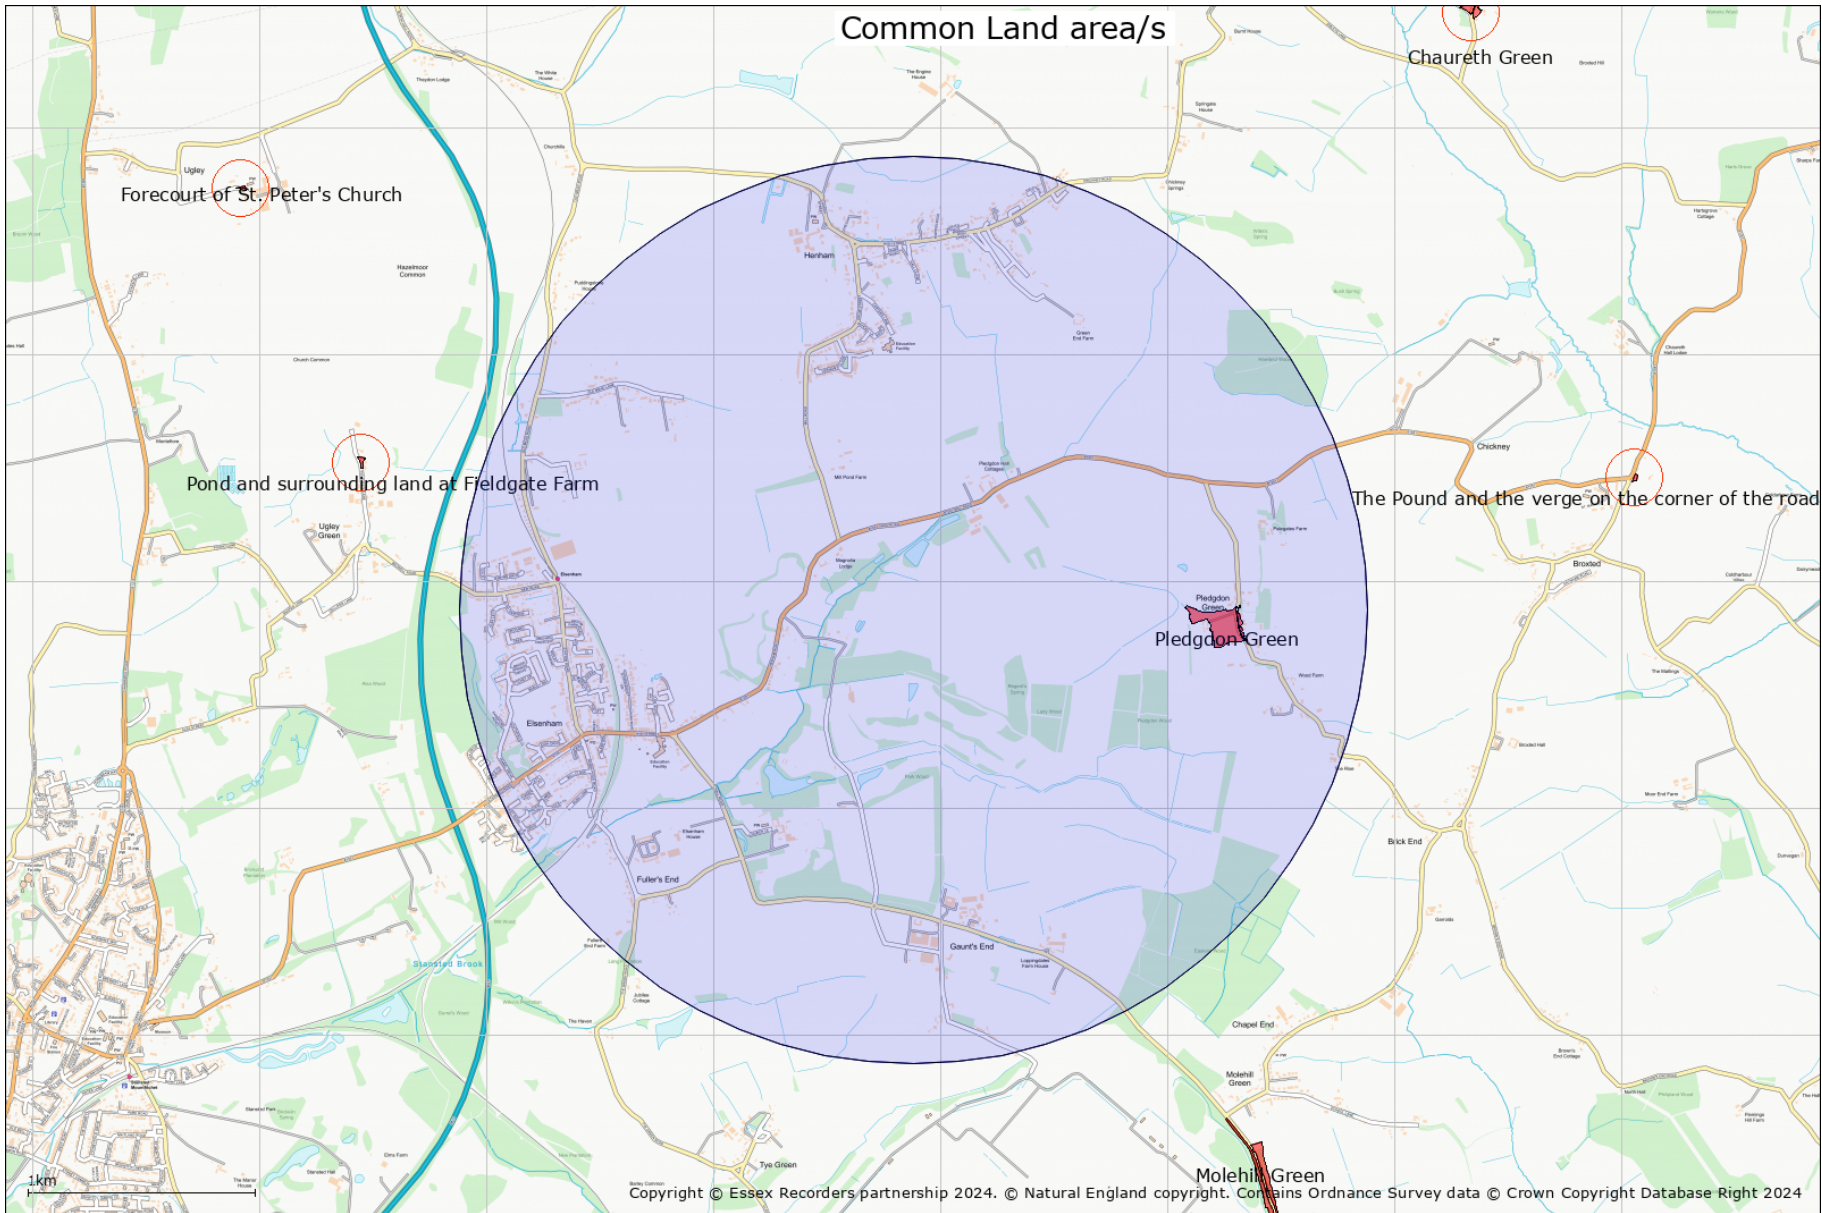

There is no right of access to land shown as OC or RCL where such land meets any of the descriptions of excepted land as specified in Part 1 of Schedule 1 of the CROW Act. This includes areas of land such as racecourses, aerodromes and military byelaw land.

There may be restrictions on the right of access in some areas of land. Under the CROW Act, landowners or tenants of access land have a 28-day allowance of restrictions each calendar year and can also apply for longer term restrictions. Digital data of restrictions to the rights of access will not be made available to third parties. All restrictions can be viewed on the website www.countrysideaccess.gov.uk. More information about restrictions can be found here: www.openaccess.gov.uk

No Open Country area/s are identified in relation to the search area

Pond and surrounding land at Fieldgate Farm
The Pound and the verge on the corner of the road junction

17. Ancient Woodland Inventory

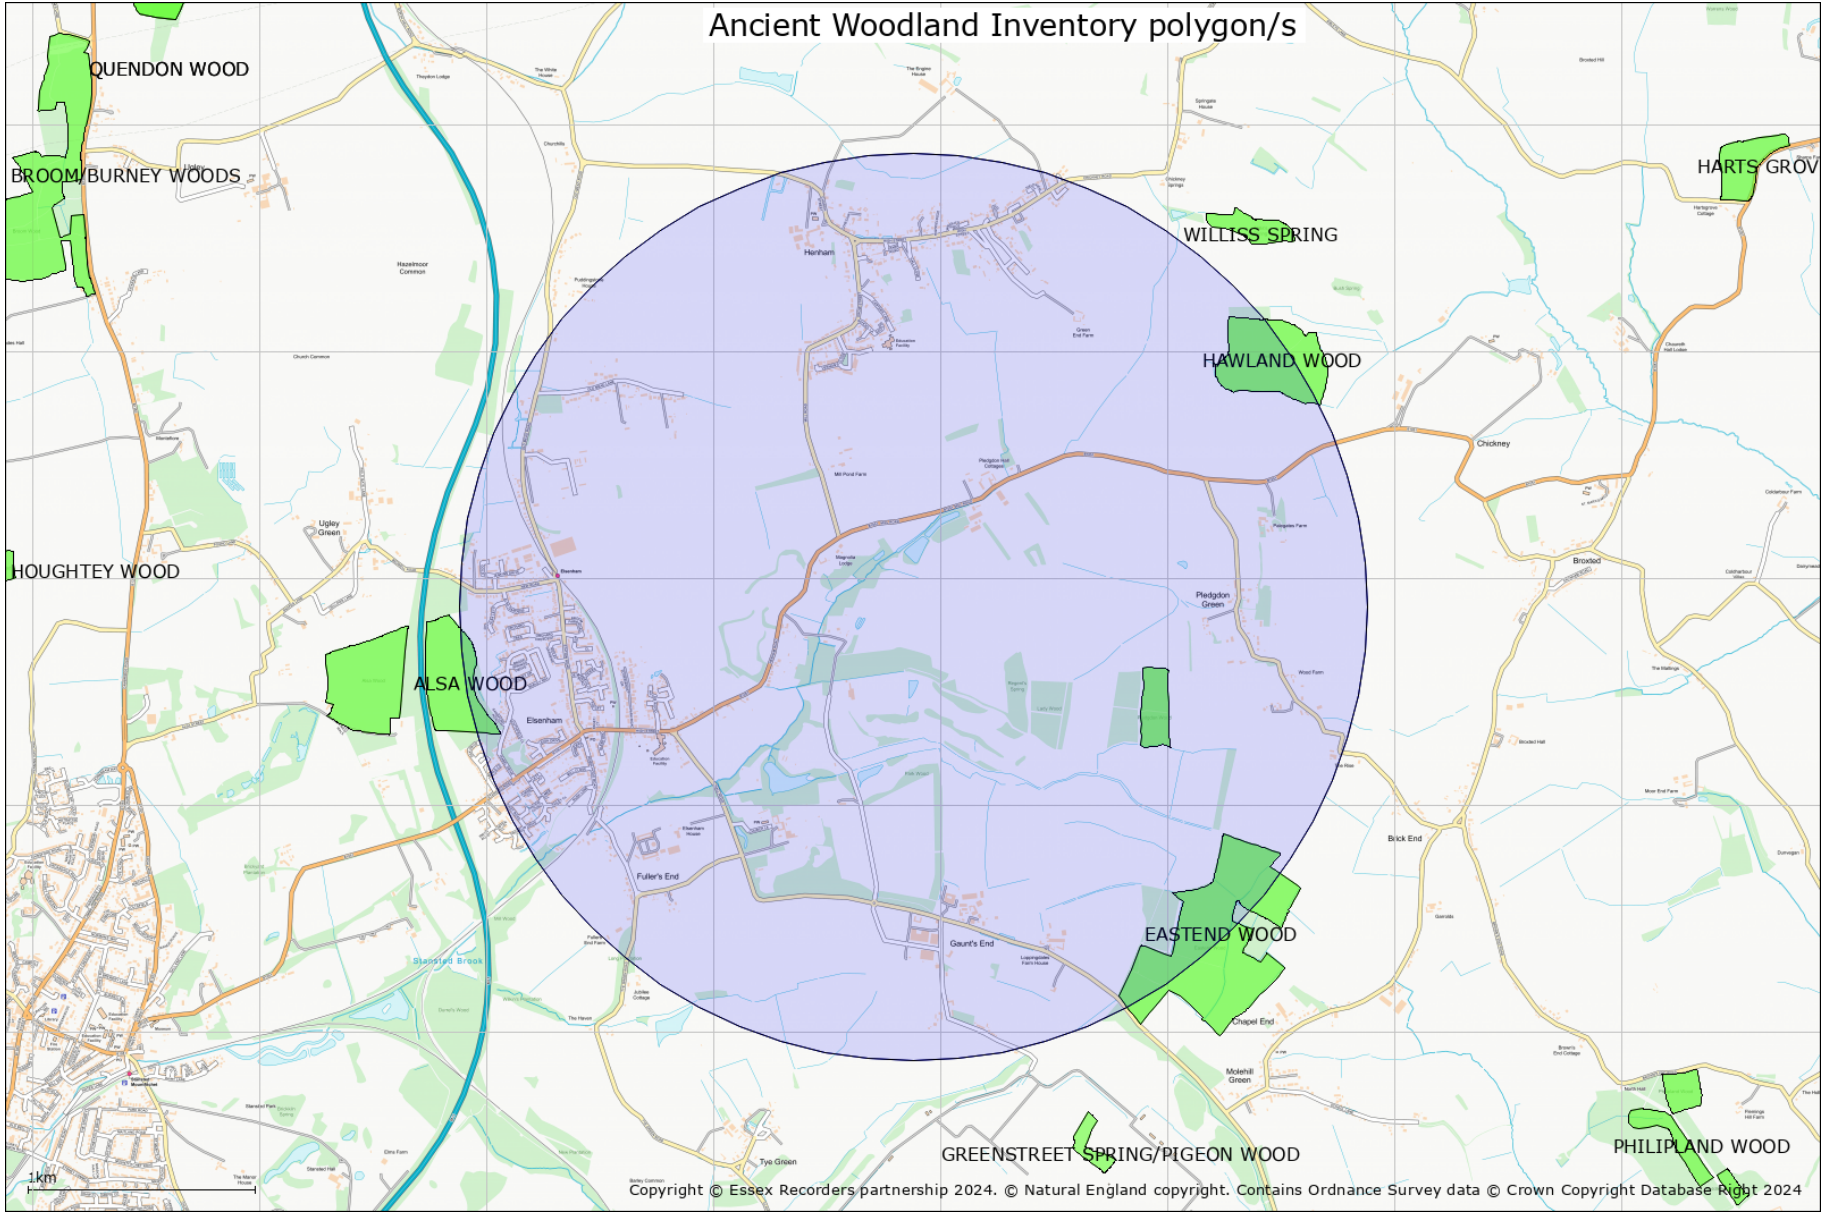

Ancient Woodlands (England). © Natural England copyright. Contains Ordnance Survey data © Crown copyright and database right [2024]

Ancient woodland is land that has had a continuous woodland cover since at least 1600 AD and may be ancient semi-natural woodland (ASNW), which retains a native tree and shrub cover that has not been planted, although it may have been managed by coppicing or felling and allowed to regenerate naturally, or plantation on ancient woodland sites (PAWS) where the original tree cover has been felled and replaced by planting, often with conifers, and usually over the last century.

See www.naturalengland.org.uk/about_us/whatwedo/partnership/casestudies/ancientwoodland.aspx

18. Wood-Pasture and Parkland BAP Priority Habitat Inventory

Natural England Wood-Pasture and Parkland BAP Priority Habitat Inventory for England (England) v2.0© Natural England [2024], reproduced with the permission of Natural England, www.naturalengland.org.uk/copyright/. © Crown Copyright and database rights [2024] Ordnance Survey licence number 100022021.

Parkland was defined as areas with a minimum of 3 trees, excluding boundary trees, which had less than 250 m between trees. Park extent was mapped to boundary features where park trees were less than 100 m from the boundary or the boundary included a large tree which was less than 250 m from a park tree.

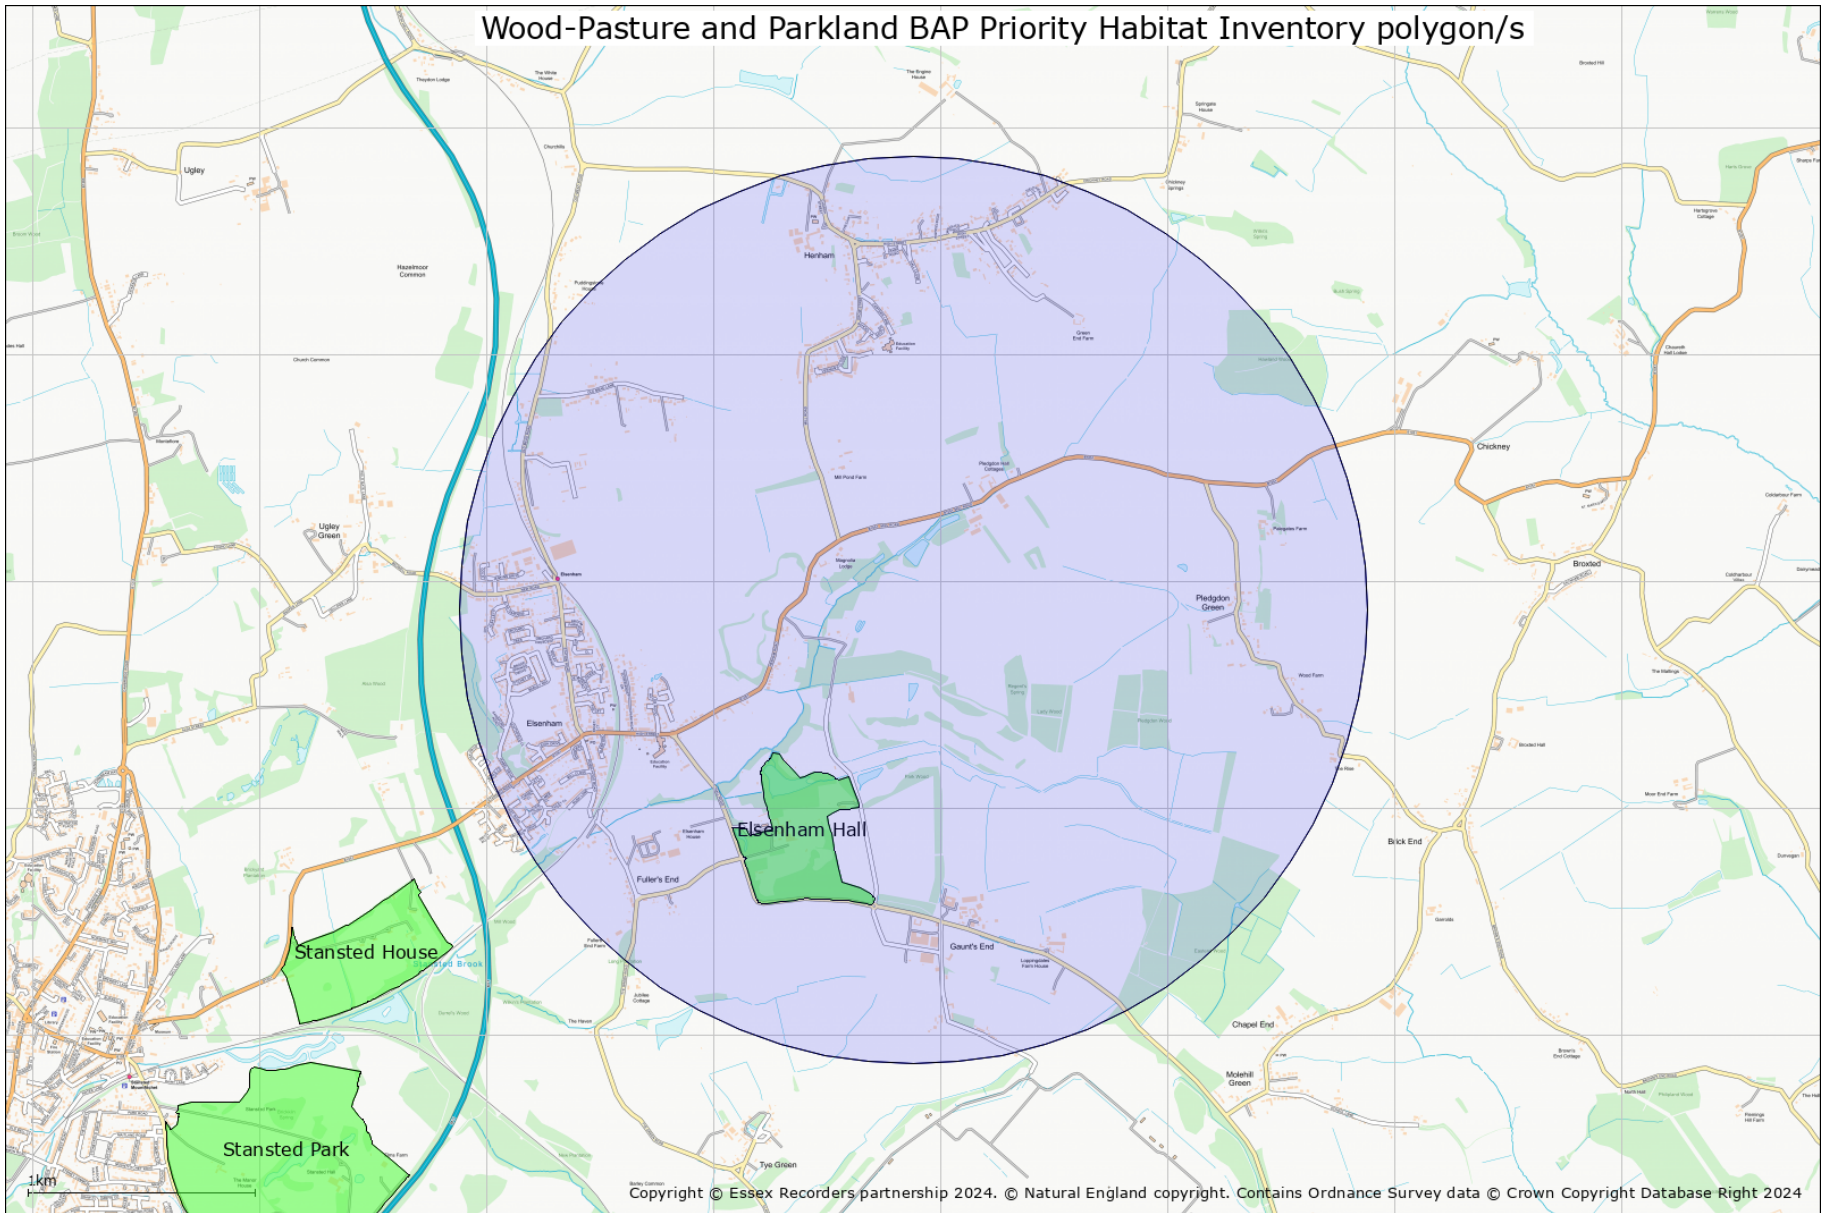

Some areas of woodland were included where possible park trees were present. Some open areas and wooded areas were not removed as the precise extent of parkland habitat was difficult to determine from aerial photography.

Cemeteries and churchyards were excluded unless they were entirely within the park boundary.

The minimum mappable unit for the inventory was 0.25ha. Metalled roads and rivers were excluded according to Natural England mapping rules, therefore some areas <0.25ha may be present if separated by a road.

There are 3 Wood-Pasture and Parkland BAP Priority Habitat Inventory polygon/s identified in relation to the map area.

Wood-Pasture and Parkland BAP Priority Habitat Inventory polygon/s

19. Traditional Orchard Inventory

Natural England Traditional Orchard Inventory (Provisional) for England© Natural England copyright. Contains Ordnance Survey data © Crown copyright and database right [2024]

Definitions

Traditional Orchard

For the purpose of the inventory, Traditional Orchards are defined as sites where at least five fruit trees must be present with no more than 20m between their crown edges. Traditional Orchards are managed in a low intensity way with the orchard floor grazed or mown for hay and with little or no chemical input.

The Traditional Orchard Inventory for England

The inventory identifies Traditional Orchard sites in England. Traditional Orchards are located using aerial photography, Ordnance Survey MasterMap, external datasets compiled from historic surveys, and ground survey ("ground-truthing"). The information recorded about each orchard and stored on the Inventory Database includes its grid reference, its area in hectares, management features of the site and its condition (based on condition assessment criteria).

Limitations of the Traditional Orchard Inventory:

The inventory is classed as 'provisional' because it is under a constant system of review and is updated as new information is received or actual changes are recorded. If you have information that would help Natural England to update the inventory please let them know.

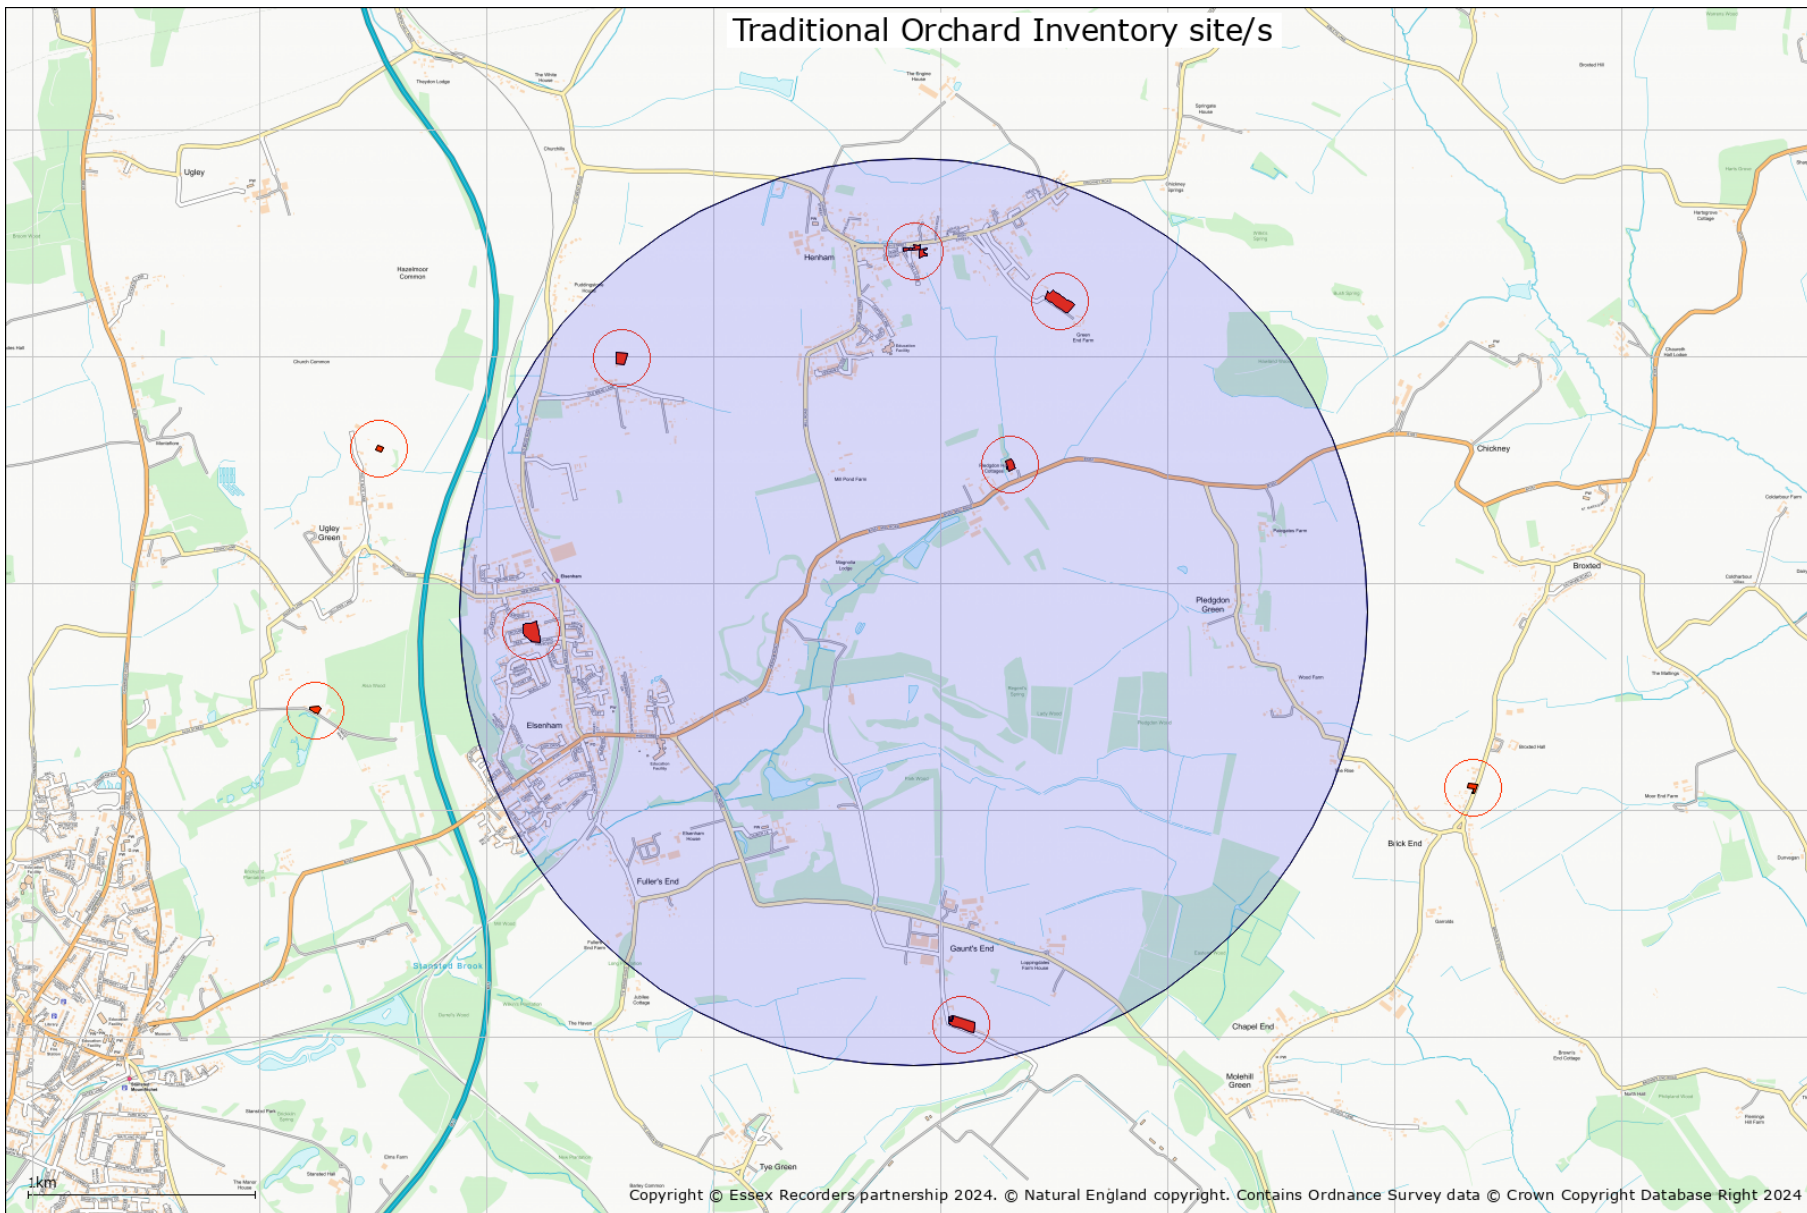

Traditional Orchards HAP Definition

Traditional orchards are defined, for priority habitat purposes, as groups of fruit and nut trees planted on vigorous rootstocks at low densities in permanent grassland; and managed in a low intensity way. Cobnut plats are also included.

The minimum size of a traditional orchard is defined as five trees with crown edges less than 20m apart. However, the potential biological and genetic interest of sites with fewer trees, such as relict orchards and individual trees within gardens is noted. Where appropriate these should be considered as potential restoration sites. It is recognised that other sites which fall outside the definition, such as organic bush orchards and fruit collections in walled gardens may also have biodiversity value, as well as historic, cultural and genetic importance.

There are 9 Traditional Orchard Inventory site/s identified in relation to the map area.

Traditional Orchard Inventory site/s

20. Priority Habitat Inventory

Natural England Priority Habitat Inventory © Natural England copyright. Contains Ordnance Survey data © Crown copyright and database right [2024]

Natural England's Priority Habitats' Inventory (PHI) is a spatial dataset that describes the geographic extent and location of priority habitats in England. The PHI has been developed to replace twenty-four separate Biodiversity Action Plan (BAP) priority habitat inventories.

PHI maps habitats of principal importance for biodiversity in England. These were previously known as Biodiversity Action Plan priority habitats.

The PHI represents the best available information on priority habitats at an England-wide level; it is not and will never be a definitive dataset for priority habitats across England. As such it should be recognised that the PHI provides a generalised map of the priority habitats in an area.

Marine and freshwater habitats are not currently included, nor are Arable field margins, Hedgerows, Inland rock and scree habitats. Some other habitats, such as Open mosaic habitats on previously developed land and Wood-pasture and parkland are also not included in PHI, but have their own separate inventories.

Priority Habitat Inventory identified in relation to the map area.

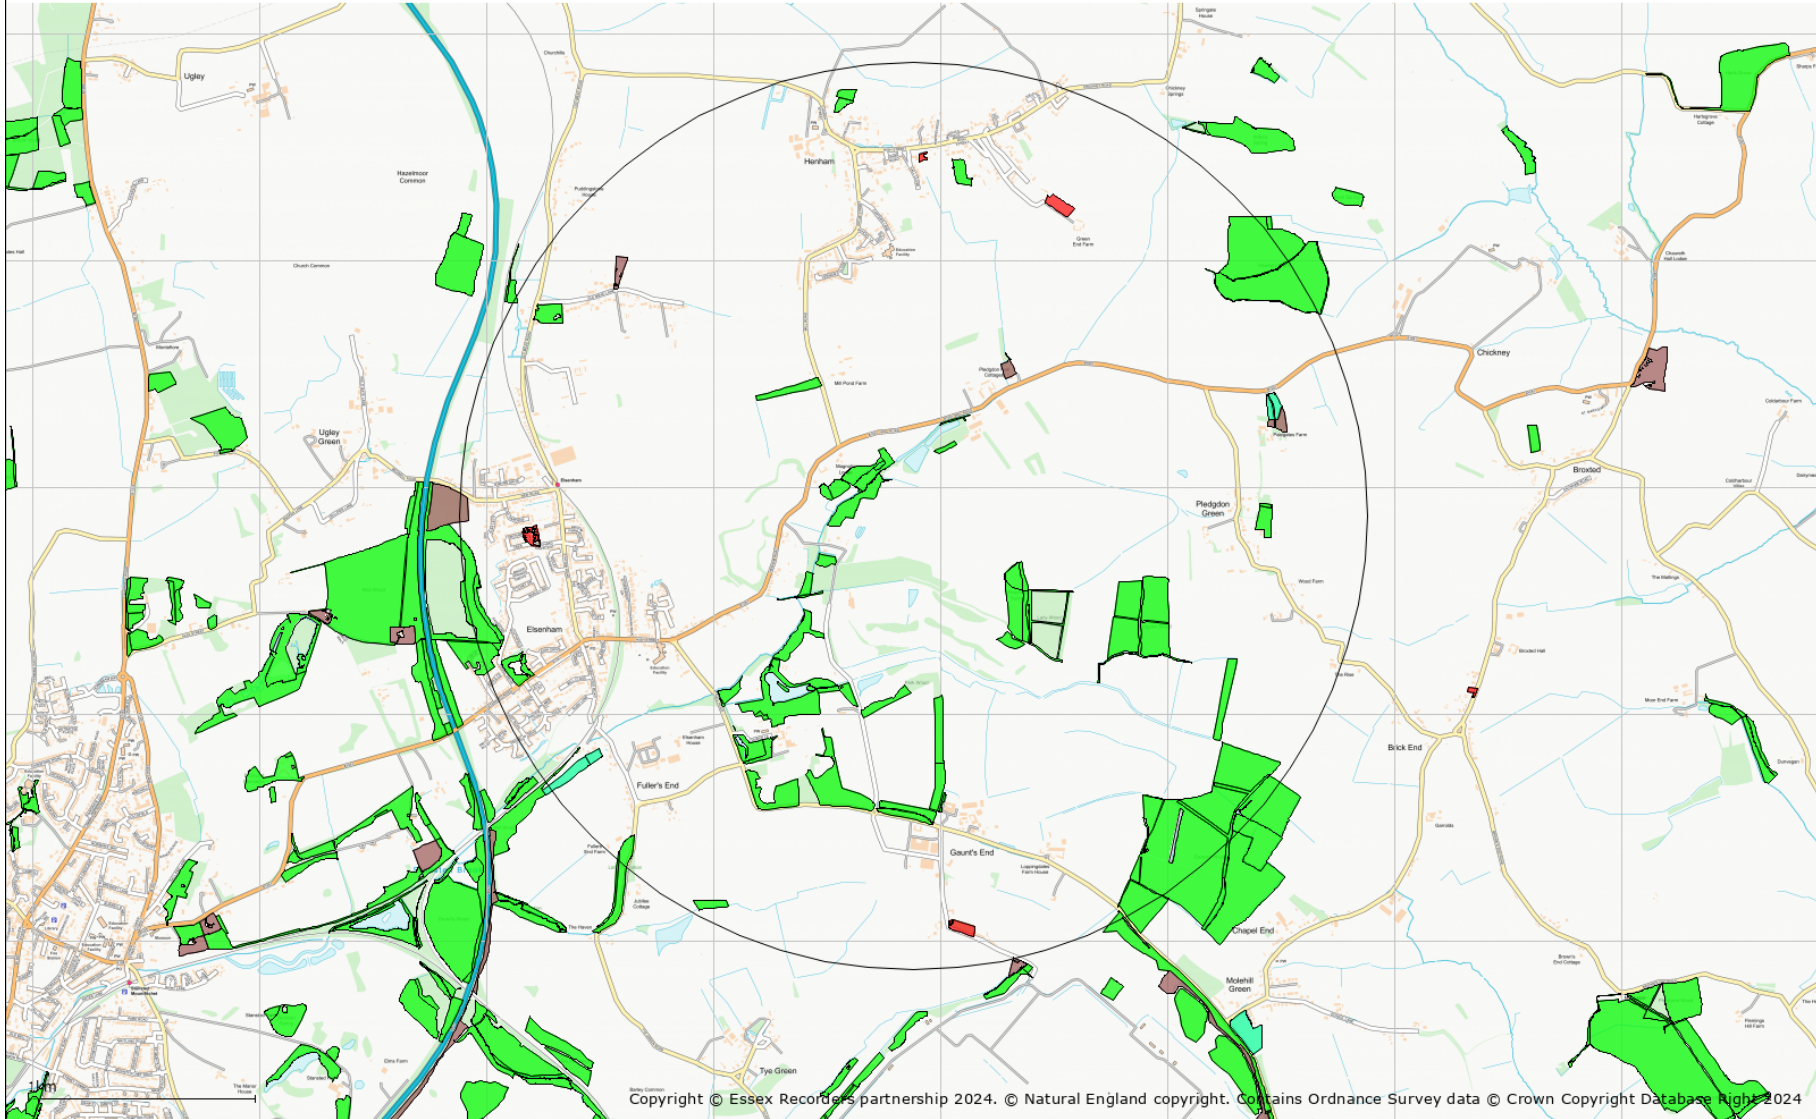

Priority Habitat Inventory

 Traditional orchard

 Deciduous woodland

 Good quality semi-improved grassland

 No main habitat but additional habitats present

21. Important Invertebrate Areas

© Buglife copyright. Contains Ordnance Survey data © Crown copyright and database right [2024]

Important Invertebrate Areas (IIAs) are nationally or internationally significant places for the conservation of invertebrates and the habitats upon which they rely. They are based on Birdlife International's successful Important Bird Areas Project (IBAs), and Plantlife's Important Plant Areas (IPAs) programme across Europe.

Areas not identified as IIAs may still be of national, regional or county importance for their invertebrates, but have not been identified by the IIA criteria.

Please see the following ISIS analyses on existing invertebrate data and ensure that CEH / Natural England's Pantheon tool is used on survey results undertaken to Natural England guidelines.

The UK and its diverse habitats support nearly 40,000 invertebrate species. They are vital to our lives, underpinning the ecosystem services which provide us with food, fertile soils and clean water, and the wildlife-rich habitats which we all enjoy. However, invertebrates are declining in response to widespread habitat loss and fragmentation, urbanisation, changing agricultural and land management practices, environmental pollution, non-native invasive species and many other factors.

IIAs are a vital tool to help identify the sites that support our most threatened and declining species to help develop a coordinated approach to securing sustainable invertebrate populations into the future and prevent their extinction. IIAs uses the knowledge and data of over 85 national recording schemes and over 45 million records, developed closely with data and taxonomic specialists to ensure a rigorous approach. IIAs have been selected where they support a nationally significant assemblage of species or support a single globally endangered, European endangered or national Critically Endangered species.

No Important Invertebrate Areas are identified in relation to the search area

Species data

The following sections provide species data in accordance with the datasearch request. Non-county designations are based on the JNCC Master List which provides information on the conservation listings of different taxa. Please note that species records are included for all 1km squares crossed by the search area. This is because many records are made at 1km resolution, and they could have been recorded anywhere within the 1km square. The data is provided for the search area on this basis and not the wider area shown on the site designation maps.

Search polygons which are not a radius from a point include a 1km extension outside the polygon boundary extents. Search polygons made up of a corridor may however include data from a wider area as defined by the east, west, south and north edges of the area.

Natural England provides new standard advice on how to address invertebrates and their habitats within the planning system. The standard advice is hosted at <http://habitatsurveys.esdm.co.uk/Data/Sites/1/media/invertebrate-standard-advice-for-essex-oct-2014.pdf>

22. Invertebrate Assemblage Information

This information is based on the use of Natural England's ISIS (2010) methodology. Assemblages are identified from records for the search area and 1km squares crossed by the search area. Please note: these assemblages are identified from existing data and the results only indicate significance already identified from untargeted survey. Specific targeted specialist survey work should be undertaken of the search area to further evaluate identified invertebrate assemblages and identify others which may be important.

Broad Assemblage Types

Invertebrate assemblages are helpful in identifying nature conservation significance of a recorded invertebrate fauna. The following Broad Assemblage Types are highlighted:

Broad Assemblage Types identified:

arboreal canopy	close to favourable condition
wood decay	favourable condition
unshaded early successional mosaic	favourable condition
grassland & scrub matrix	close to favourable condition
shaded field & ground layer	close to favourable condition
mineral marsh & open water	important assemblage
permanent wet mire	important assemblage

Specific Assemblage Types

Specific Assemblage Types (SATs) are characterised by ecologically restricted species and are generally only expressed in lists from sites with conservation value. They have intrinsic value for nature conservation and are designed to be used in setting invertebrate conservation objectives on SSSIs (Lott, 2008).

Specific Assemblage Types identified:

heartwood decay	favourable condition
bark & sapwood decay	favourable condition
fungal fruiting bodies	important assemblage
epiphyte fauna	
bare sand & chalk	important assemblage
open short sward	important assemblage
reedfen and pools	
scrub edge	favourable condition
rich flower resource	favourable condition
scrub-heath & moorland	

23. Protected Species

Protected species have protection under national legislation such as the Wildlife and Countryside Act 1981 and European legislation such as the Habitats Directive.

Please note the following:

(1) If there is no record of a particular protected species, this does not signify that the species is absent from the site in question. It may mean that it has not been recorded, that the site has not been surveyed for this species, or that data relating to its presence has not been made available to us.

(2) The presence of a protected species record does not mean that the species is still present. It means that the species was recorded at that time and place. The implications of the record should be further evaluated, and a survey to establish the current status may be required.

(3) The following summary of legislation is designed purely as a basic guide, if any action is to be taken regarding any of the protected species listed, then it is imperative that the full relevant legislation be consulted.

(4) Information on Badger setts is available from the four Essex Badger Groups by contacting them direct: Essex Badger Protection Group covers the south of the county - www.essexbadger.co.uk; North East Essex Badger Group, north to the Suffolk border - www.neebg.co.uk; Uttlesford Badger Group covers west Essex - www.ubg-uk.org; Harlow Badger Group covers Harlow and Epping Forest Districts - www.hbg-uk.org

WILDLIFE PROTECTION LEGISLATION IN ENGLAND

Legislation that protects wildlife in England exists at the European and national level.

European Law

The Bern Convention on the Conservation of European Wildlife and Natural Habitats (1979) was aimed at ensuring conservation and protection of all wild plants and animals, increasing cooperation between states, and affording special protection to the most vulnerable or threatened species. It was implemented by the EC Birds Directive (Council Directive 79/409/EEC) and the EC Habitats Directive (Council Directive 92/43/EEC).

The Bonn Convention on Migratory Species of Wild Animals (1979 & 1994) requires the protection of migratory animals. It was implemented by the EC Birds Directive (Council Directive 79/409/EEC) and the EC Habitats Directive (Council Directive 92/43/EEC).

The EC Habitats Directive aims to establish a network of protected areas in order to maintain the distribution and the abundance of threatened species and habitats. A number of species are listed in the annexes.

Annex II lists animals and plants whose conservation requires the designation of Special Areas of Conservation (SACs).

Annex IV lists animals and plants in need of strict protection. For the animals, this prohibits deliberate capture, killing, disturbance (especially during breeding period), destruction or taking of eggs from wild, and destruction or deterioration of breeding sites or resting places. For the plants, this prohibits deliberate picking, collecting, uprooting, cutting, destruction, and trade in entire plants or parts, at all stages of life.

Annex V lists animals and plants for which taking in the wild may be subject to management measures.

National Law

Wildlife and Countryside Act

The Wildlife and Countryside Act 1981 (as amended) is the main source of legal protection for wildlife in England and was strengthened by the Countryside and Rights of Way Act 2000. A statutory five-yearly review of Schedules 5 and 8 (protected wild animals and plants) is undertaken by the relevant authorities. Species protection is provided under Schedules 1, 5, 6 and 8:

Schedule 1 lists bird species that are rare, endangered, declining or vulnerable. The Schedule is divided into two parts. Part I lists birds which receive special protection, these birds receive additional protection from disturbance at the nest. Part II lists birds that receive the same level of special protection, but only during the breeding season.

Schedule 5 protects animal (other than bird) species from certain actions, according to the sections of the Act under which they are listed:

- S9(1) prohibits the intentional killing, injury or taking.
- S9(2) protection is limited to possessing and controlling.
- S9(4a) prohibits the damaging, destroying or obstructing access to any place used by the animal for shelter or protection.
- S9(4b) prohibits disturbing the animal while it is occupying any structure or place which it uses for shelter or protection.
- S9(5) prohibits the selling, offering for sale, possessing or transporting for purpose of sale, or advertising for sale, any live or dead animal, or any part of, or anything derived from such an animal. Species on this Schedule do not appear on the PSI.

Schedule 6 lists animals that may not be killed by certain methods. Even humane trapping for research requires a licence.

Schedule 8 lists plant species for which it is prohibited to intentionally pick, uproot, destroy, trade in, or possess (for the purposes of trade).

Under the Wildlife and Countryside Act, all wild plants in Britain are protected from intentional uprooting by an unauthorised person. Landowners, land occupiers, persons authorised by either of these, or persons authorised in writing by the Local Authority for the area are exempt from this, except for Schedule 8 species.

Conservation Regulations

The Conservation of Habitats and Species Regulations 2010 (as amended) transpose the EC Habitats Directive into national law. In addition to enabling the designation of SACs, the regulations also provide species protection:

Schedule 2 protects the listed animals from deliberate capture, killing, disturbance or trading in.

Schedule 4 protects the listed plants from picking, collecting, uprooting, destroying or trading in.

These actions can be made lawful through the granting of licences by the appropriate authorities. Licences may be granted for a number of purposes, but only after the appropriate authority is satisfied that there are no satisfactory alternatives and that such actions will have no detrimental effect on wild the population of the species concerned.

Protection of Badgers Act

The Protection of the Badgers Act prohibits the killing, injuring or taking of badgers and damage or interference with a badger sett, unless licensed to do so by a statutory authority.

International and European Obligations

In the UK, species receiving protection under international legislation and agreements are protected through the Wildlife and Countryside Act, so are not shown separately in the BMERC notable species lists. For reference, the relevant categories are shown below.

Bern Convention on the Conservation of European Wildlife and Natural Habitats

The Bern Convention aims to ensure the conservation of wild flora and fauna species and their habitats.

- Appendix 1 (strictly protected flora) - Plants for which contracting parties will prohibit deliberate picking, collecting, cutting or uprooting.
- Appendix 2 (strictly protected fauna) - Animals for which contracting parties will prohibit deliberate capture, possession, killing, damage to or destruction of breeding or resting sites, disturbance or destruction or taking of eggs.
- Appendix 3 (protected fauna) - Animals for which contracting parties will include closed seasons and regulate their sale, keeping for sale, transport for sale or offering for sale of live and dead wild animals. (Not included in Notable Species List).

Bonn Convention on Migratory Species

The Bonn Convention aims to conserve terrestrial, marine and avian migratory species throughout their range.

- Appendix 1 (migratory species threatened with extinction) - Species for which contracting parties will strictly protect and endeavour to conserve or restore the places where they live, mitigating obstacles to migration and controlling other factors that might endanger them.
- Appendix 2 (migratory species that need or would benefit from international co-operation) - Species for which contracting parties will be encouraged to conclude global or regional agreements for the conservation and management of individual species or, more often, of a group of species. (Not included in Notable Species List).

The EC Council Directive on the Conservation of Wild Birds

The Birds Directive provides a framework for the conservation and management of all wild birds in Europe. As well as designating important sites for birds as Special Protection Areas, birds are generally protected from deliberate killing or capture and destruction of or damage to their nests or eggs, and deliberate disturbance. Allowances are made for game birds.

Protected Species Table

Source	Taxon	Group	Vernacular	Status	Location	Position	Records	Latest

24. UK Biodiversity Action Plan Priority Section 41 Species

Biodiversity, or biological diversity, is the whole variety of life on Earth. The Convention on Biological Diversity (CBD) came about as a result of the 1992 Earth Summit. As one of 168 countries to sign up to the CBD, the UK was required to develop a national strategy for the conservation of biodiversity; the UK Biodiversity Action Plan (UKBAP) was born.

The UKBAP is the result of contributions involving a wide range of people and organisations, enabling the identification of species and habitats that are listed as priorities for conservation action. A 2007 review of the UKBAP has resulted in 1149 species and 65 habitats being listed as conservation priorities. For more information see www.ukbap.org.uk.

In addition to the national priorities and targets, action is also being taken at local level. The Essex Biodiversity Project is responsible for implementing the Essex Biodiversity Action Plan, which has 28 priority species and 15 priority habitats currently listed. For more information see www.essexbiodiversity.org.uk.

The UK BAP

(from Explanatory Note by Defra and Natural England on Section 41 of the Natural Environment and Rural Communities (NERC) Act 2006 - Habitats and Species of Principal Importance in England)

The England Biodiversity List has been developed to meet the requirements of Section 41 of the Natural Environment and Rural Communities Act (2006). This legislation requires the Secretary of State to publish a list of species of flora and fauna and habitats considered to be of principal importance for the purpose of conserving biodiversity.

The S41 list will be used to guide decision-makers such as public bodies, including local and regional authorities, in implementing their duty under section 40 of the Natural Environment and Rural Communities Act 2006 'to have regard' to the conservation of biodiversity in England, when carrying out their normal functions. In particular:

- Regional Planning Bodies and Local Planning Authorities will use it to identify the species and habitats that should be afforded priority when applying the requirements of National Planning Policy framework (NPPF) and PPS9 Circular to maintain, restore and enhance species and habitats.
- Local Planning Authorities will use it to identify the species and habitats that require specific consideration in dealing with planning and development control, recognising that under NPPF and PPS9 Circular the aim of planning decisions should be to avoid harm to all biodiversity.
- All Public Bodies will use it to identify species or habitats that should be given priority when implementing the NERC Section 40 duty.

Habitats of Principal Importance

Fifty-six habitats of principal importance are included on the S41 list. These are all the habitats in England that have been identified as requiring action in the UK Biodiversity Action Plan (UK BAP). They range from habitats such as upland hay meadows to lowland mixed deciduous woodland and from freshwater habitats such as ponds to marine habitats such as subtidal sands and gravels.

Species of Principal Importance

There are 943 species of principal importance included on the S41 list. These are the species found

in England which have been identified as requiring action under the UK BAP. In addition, the Hen Harrier has also been included on the List because without continued conservation action it is unlikely that the Hen Harrier population will increase from its current very low levels in England.

Relationship with the UK Biodiversity List of Species and Habitats

The UK BAP list of priority species and habitats is an important reference source and will be the focus for conservation action across the UK over the next decade. It has been used to draw up the species and habitats of principal importance in England under S41 of the NERC Act.

The revised UK BAP list of priority species and habitats can be downloaded from the UK Biodiversity Website: <http://www.ukbap.org.uk/NewPriorityList.aspx>

Relationship with the biodiversity duty under Section 40 of the NERC Act

There is a general biodiversity duty in the NERC Act (Section 40) which requires every public body in the exercising of its functions to 'have regard, so far as is consistent with the proper exercise of those functions, to the purpose of conserving biodiversity'.

There is no direct relationship between the Section 41 duty on the Secretary of State to publish the list and promote the taking of steps to conserve the habitats and species on it, and the Section 40 duty on public bodies to have regard to the purpose of conserving biodiversity. Importantly:

(a) Biodiversity, as covered by the Section 40 duty includes all biodiversity and not just the habitats and species of principal importance. However, there is an expectation that public bodies would refer to the S41 list when complying with the section 40 duty.

(b) The duty on the Secretary of State to promote the taking of steps by others is not restricted to public bodies.

Defra guidance for local authorities and public bodies on implementing the biodiversity duty in the NERC Act draws attention to the S41 list, emphasising that local authorities and public bodies have a role to play in ensuring the protection of these species and habitats. Copies of the guidance can be downloaded

from: <http://archive.defra.gov.uk/environment/biodiversity/documents/pa-guid-english.pdf>

Essex Biodiversity Action Plan

The Essex Biodiversity Project was set up in 1999 for the purpose of implementing the Essex BAP, one of the 162 local BAPs in the UK. These were formed following the UK's signature to the Convention on Biological Diversity (1992) and the subsequent need for action to conserve biodiversity at a local level.

The overall aim of the Essex Biodiversity Project is to protect, conserve and enhance the variety of wildlife species and habitats in Essex through the successful implementation of the Essex Biodiversity Action Plan.

25. Global & National Red List and Scarce Designations

Red Data Book Species

National Red Data Book species are those falling within the Status categories defined in the British Red Data Books (Bratton, 1991; Shirt, 1987). These are internationally recognised species listed in the various Red Data Books published by, or under the auspices of, the International Union for the Conservation of Nature (IUCN). Species included may not be informally removed or transferred between categories. Nationally Endangered (RDB1) taxa are those considered to be in danger of extinction and whose survival is unlikely if the causal factors continue operating. These include species known from only a single locality since 1970, species restricted to habitats which are especially vulnerable, species which have shown a rapid and continuous decline in the last twenty years and are now estimated to exist in five or fewer ten km squares and species believed extinct but which would need protection if re-discovered. Nationally Vulnerable (RDB2) taxa are those that are believed likely to move into the Endangered category in the near future if the causal factors causing their decline continue operating. This includes species declining throughout their range, species in vulnerable habitats and species whose populations are low. Nationally Rare (RDB3) taxa are those with small populations that are not at present Endangered or Vulnerable, but are at risk. This includes species known or estimated to exist in only 15 or fewer post 1970 ten km squares. Insufficiently Known (RDBK) taxa are those suspected of falling into categories 1-3, but about which there is insufficient information to be certain.

Various new status reviews have been published in recent years. A brief outline of the revised IUCN criteria and their application, as summarised in these reviews, is given below.

EXTINCT (EX)

A taxon is Extinct when there is no reasonable doubt that the last individual has died.

EXTINCT IN THE WILD (EW)

A taxon is Extinct in the wild when it is known to survive only in cultivation, in captivity or as a naturalised population (or populations) well outside the past range. A taxon is presumed extinct in the wild when exhaustive surveys in known and/or expected habitat, at appropriate times (diurnal, seasonal, annual) throughout its range have failed to record an individual. Surveys should be over a time frame appropriate to the taxon's life cycle and life form.

CRITICALLY ENDANGERED (CR)

A taxon is Critically Endangered when it is facing an extremely high risk of extinction in the wild in the immediate future, as detailed by any of the criteria A to E. *

ENDANGERED (EN)

A taxon is Endangered when it is not Critically Endangered but is facing a very high risk of extinction in the wild in the near future, as defined by any of the criteria A to E. *

VULNERABLE (VU)

A taxon is Vulnerable when it is not Critically Endangered or Endangered but is facing a high risk of extinction in the wild in the medium term future, as defined by any of the criteria A to D. *

LOWER RISK (LR)

A taxon is Lower Risk when it has been evaluated but does not satisfy the criteria for any of the categories Critically Endangered, Endangered or Vulnerable. Taxa included in the Lower Risk category can be separated into three sub-categories:

Conservation Dependent (cd)

Taxa which are the focus of a continuing taxon-specific or habitat-specific conservation programme targeted towards the taxon in question, the cessation of which would result in the taxon qualifying for one of the threatened categories above within a period of five years.

Near Threatened (nt)

Taxa which do not qualify for Lower Risk (Conservation Dependent), but which are close to qualifying for Vulnerable.

Least Concern (lc)

Taxa which do not qualify for Lower Risk (Conservation Dependent) or Lower Risk (Near Threatened).

DATA DEFICIENT (DD)

A taxon is Data Deficient when there is inadequate information to make a direct or indirect assessment of its risk of extinction based on its distribution and/or population status. A taxon in this category may be well studied, and its biology well known, but appropriate data on abundance and/or distribution are lacking. Data Deficient is therefore not a category of threat or Lower Risk. Listing of taxa in this category indicates that more information is required and acknowledges the possibility that future research will show that a threatened category is appropriate.

NOT EVALUATED (NE)

A taxon is Not Evaluated when it has not been assessed against the criteria.

Nationally Scarce species

The concept of Nationally Scarce (Notable) species was introduced by Ball (1986). They are species which are estimated to occur within the range of 16 to 100 ten-kilometre squares of the British National Grid system since 1970 and are subdivided as follows: Notable/Na refers to species estimated to occur within the range of 16 to 30 10-kilometre squares of the National Grid System. Notable/Nb refers to species estimated to occur within the range 31 to 100 10-kilometre squares of the National Grid System. Diptera (flies) and some Coleoptera (beetles) are not separated. Categorisations have been revised for various taxonomic groups including Araneae (spiders) in Merrett (1990), aculeate Hymenoptera in Falk (1991a), Coleoptera in Hyman & Parsons (1992, 1994), Diptera in Falk (1991b), Hemiptera in Kirby (1992) and Pyralidae (Lepidoptera) in Parsons (1993).

The concept of nationally scarce (Notable) species is unaltered in the new status reviews (e.g. Falk, S.J. & Crossley, R., 2005; Falk, S.J. & Chandler, P., 2005), but the status is now known as Scarce.

In a new national spider review a 'Watching Brief' category is included for some species where the data available suggest a greater level of threat, but there is uncertainty about the evidence of decline. There are also a number of much more widespread and common species where the data suggest strong declines may be occurring. These have placed these in the 'Watching Brief' category outside of the national status review, but these species should be specifically monitored in the future to understand their status more satisfactorily.

A record does not necessarily indicate a native population and for example some plant records may originate from seed mixes or be agricultural variants.

National Status Species Table

Source	Taxon	Group	Vernacular	Status	Location	Position	Records	Latest
Essex Birdwatching Society	<i>Accipiter nisus</i>	bird	Sparrowhawk	Red data categories - birds (not based on IUCN criteria): Bird Population Status - amber, Red listing based on 2001 IUCN guidelines (from 2017): Near Threatened	Elsenham Hall, near Stansted Mountfitchett	TL5425	1	2015

Essex Field Club	<i>Vicia sativa subsp. segetalis</i>	flowering plant	Common Vetch	Red listing based on 2001 IUCN guidelines (from 2014): Waiting List	Henham and Elsenham	TL5327	1	1996

26. Essex Red Data List Species

Information contained in the Inventory

The Essex Red Data List was compiled in 2002 for English Nature (now Natural England), with the input of County Recorders and other county specialists and with an extensive period of consultation. The full list is available at www.essexfieldclub.org.uk/portal/p/Essex+Red+Data+List.

The list is an important compilation of Essex information, helping to inform and better enable biodiversity and planning decisions throughout the county. As an internet resource, the list has been updated, with changes listed on the website.

Inclusion of species on the list is guided by the following key criteria:

- In the national Red Data List (where one exists)
- Nationally Scarce/Notable (where there is an available definition and list).
- Species which are rare, declining and/or subject to a high degree of threat in Essex (and not in either of the above categories).

Depending on the degree of regional knowledge this is related to:

- Species recorded in few modern sites (X or fewer sites, since 19XX).
- Species with restricted distribution occurring in habitats under a high degree of threat nationally and/or within the county.
- More widespread species which have undergone a substantial decline in number or distribution since 19XX.
- Species which are extinct in Essex, and for which there is significant potential for re-establishment, either naturally or through intervention.

The values of X will vary for different taxonomic groups; County Recorders and other county specialists have used their knowledge to determine the threshold values for each particular taxonomic group in Essex.

In addition, Essex Red Data List Threat Statuses have been assigned to the Arachnida, aculeate Hymenoptera, Syrphidae, larger Brachycera, Orthoptera and Odonata taxonomic groups. These threat categories are defined* as:

Essex Endangered

- Species known as a single population within a single post-1980 1km² or only from threatened or vulnerable sites in Essex.
- Species believed extinct in Essex.

Essex Vulnerable

- Species known from only two populations in Essex.
- Essex Rare species which are restricted to habitats or sites known to be under threat in Essex.
- Species which only occur at sites in Essex known to be vulnerable.
- Species which have shown a continuous decline over the last twenty years and are now known to exist in less than 1% of the covered post-1980 1km² in Essex.

Essex Threatened

- Essex Scarce species with a Frequency Ratio of less than 1.5 and Tetrad percentage of less than 1.0 indicating widely isolated populations within the county.
- Essex Scarce species which are restricted to habitats or sites known to be under threat in the county.
- Species which have shown a continuous decline over the last twenty years.

Regionally Important

- Species which are important in a national context because Essex contains a significant proportion of the national populations.
- Species which are important in a national context because they have a close association with a specific nationally threatened habitat included in the Biodiversity Action Plan.
- Species which are important in a national context because they are dominant in or peculiar to a specific habitat for which Essex contains a large percentage of the national habitat.

* Detailed information is available at

<http://www.essexfieldclub.org.uk/portal/p/Essex+Red+Data+threat+statuses>

Where a taxon not included in the list has been recorded from 6 or less of the 57 tetrads (10km squares) covering the Watsonian VCs 18 and 19 it has been accorded a provisional Essex Red Data List status (pListed) here.

Essex Red Species Table

Source	Taxon	Group	Vernacular	Status	Location	Position	Records	Latest
Essex Field Club	<i>Agrilus laticornis</i>	insect - beetle (Coleoptera)		Listed	Elsenham Old Sand Pit, south	TL5426	1	2008

27. Invasive Species

Information about invasive species

Invasive species may threaten habitats and species with biodiversity and nature conservation value. Where invasive species are present, action may or may not be appropriate to control their spread or to eliminate them from sites and habitats.

Invasive Species Action Plans are used to help coordinate the response to key invasive non-native species across England, Scotland and Wales. The plans provide a short and strategic overview identifying the key aims, objectives and actions. They can be seen on the Defra website at <https://secure.fera.defra.gov.uk/nonnativespecies/index.cfm?sectionid=92>

Action on invasive species

The appropriate response to the presence of an invasive species will vary depending on the species and the degree to which it is or may in the future cause damage to the ecology at the location.

Identification of invasive species

Identification of invasive non-native species is an essential part of invasive species management and guidance can be found on the Defra website at <https://secure.fera.defra.gov.uk/nonnativespecies/index.cfm?sectionid=47>

Invasive species records

Most existing records of invasive species in Essex are made during general recording, although there are plans to encourage targeted recording of these species in the future.

Where you have records of invasive species for the search area, please submit them to us by email to datasearch@essexfieldclub.org.uk or via our website at www.essexfieldclub.org.uk

Where invasive species have been recorded, their records are summarised in the following table.

Invasive Species

Vascular plants	6099

Geological Site Information

The geological site database includes and describes geological sites which are of regional or local importance for their scientific, historical and/or educational value unlike the strictly scientific criteria applied to the SSSIs (Sites of Special Scientific Interest) which are of national importance. These are not 'second tier' sites but sites of regional and local value in their own right.

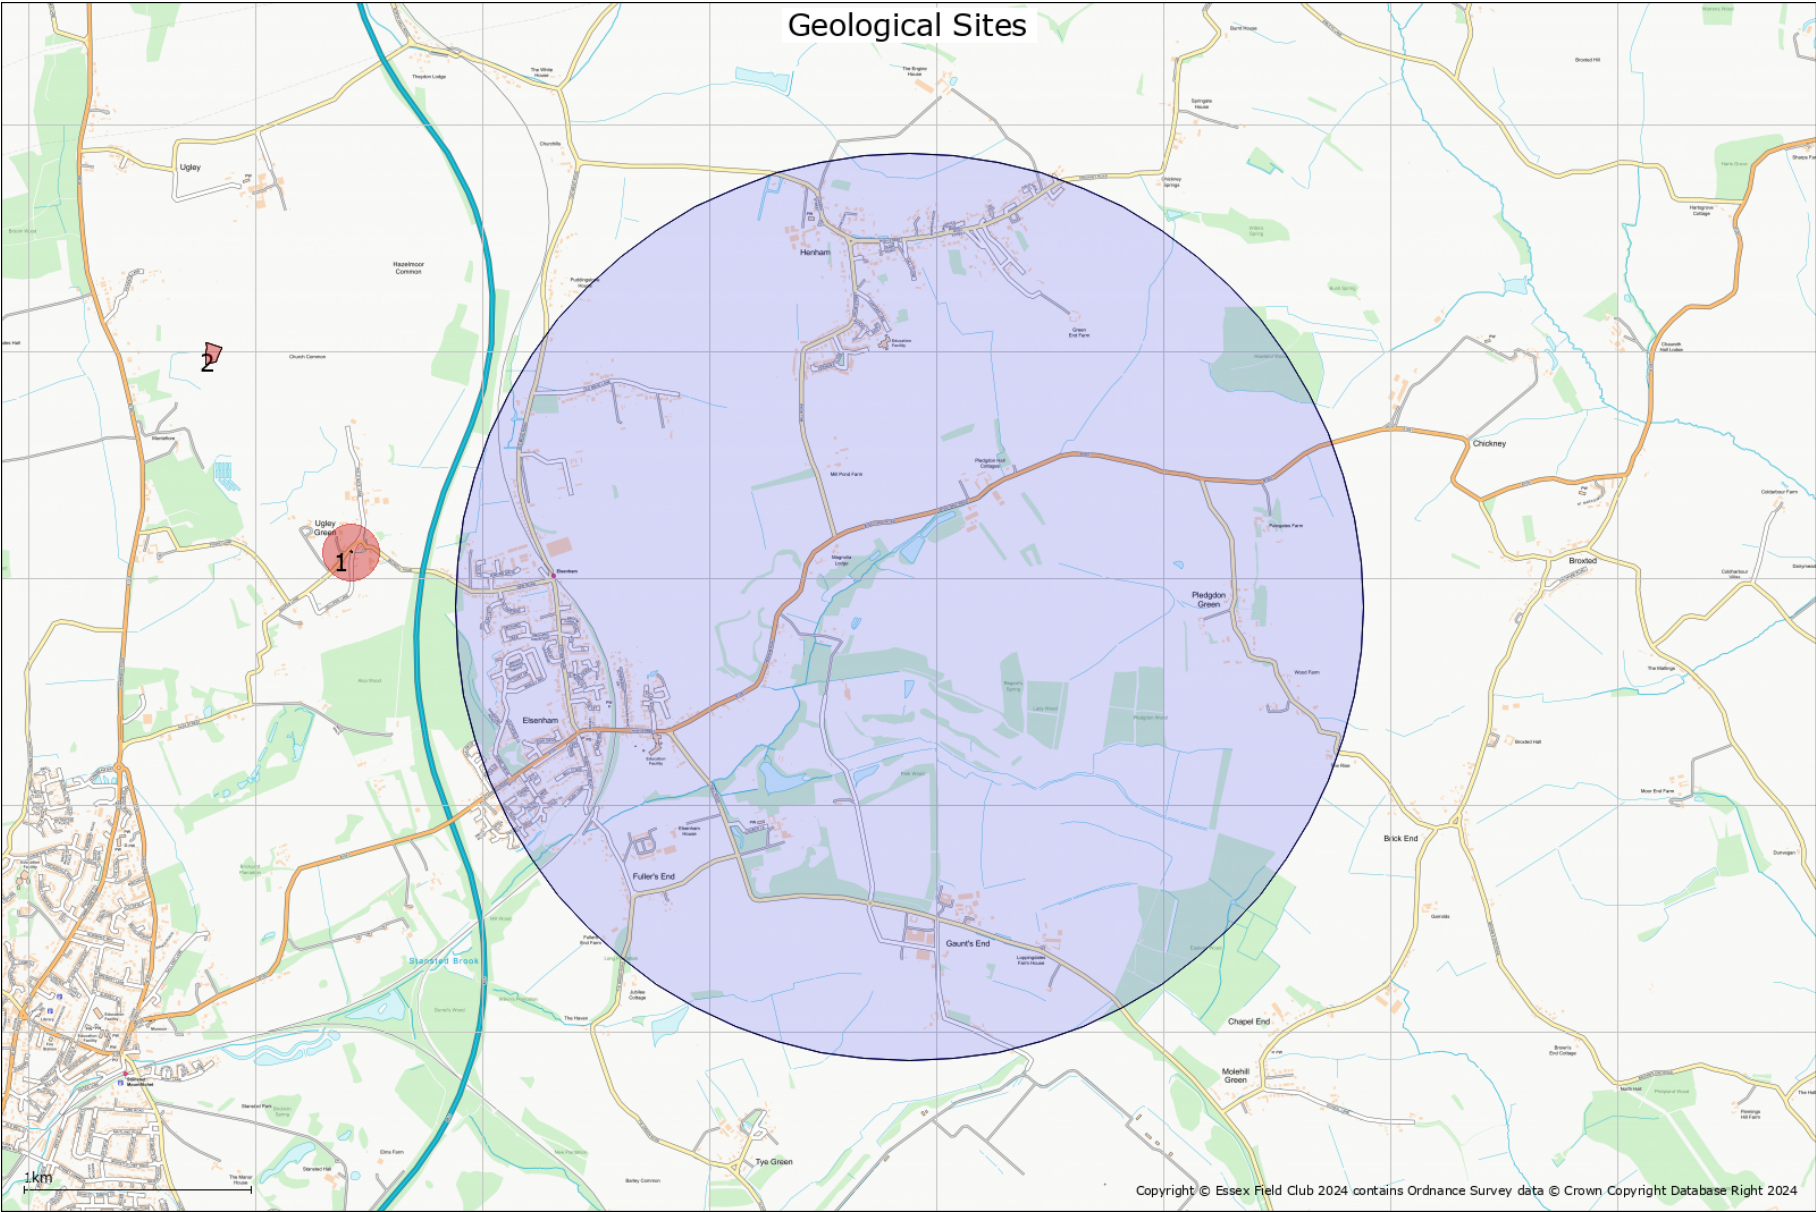

Some of these sites are being designated as Local Geological Sites (LOGS), formerly called Regionally Important Geological Sites, or have the potential to be so designated, and these sites are marked as such. Existing SSSIs which have been designated for their geological importance are also included in this database.

Note: Some of the sites in the geological site database are solely of historical interest as a record of an important or interesting discovery. There are also sites which are not strictly geological but nevertheless have a geological connection, for example buildings constructed of local stone. These sites have not been included in this report.

Although many of the sites listed are publicly accessible, inclusion of a site in this database does not imply any rights of access. Permission to visit must always be obtained from the relevant landowner.

Geological Sites

Geological Site Information

1. Ugley Green Puddingstone , Notified Local Geological Site, TL52422712

Site name: Ugley Green Puddingstone

Grid reference: TL 5242 2712

Brief description of site:

Beside the green, next to the village pump, is a fine boulder of Hertfordshire puddingstone 1.2 metres (4 feet) long. It was formerly situated on the village green.

Another boulder of Hertfordshire puddingstone (90cm x 40cm x 40cm in size) is situated just inside the yard of Foxton's Farm nearby (TL 5250 2725).

Details

Hertfordshire Puddingstone was formed around 55 million years ago when the climate of Britain was hot and a layer of pebbles beneath the surface of the ground became cemented with quartz. They are thus very resistant to erosion and have survived the rigours of the Ice Age. They originated in Hertfordshire, hence the name, and were probably carried to Essex by the River Thames when it flowed north of its present course. However, the distribution and abundance of Hertfordshire puddingstone in parts of Essex suggests that some occurrences may have a local Essex source.

The formation of silcretes (which includes sarsens and puddingstones) has been the subject of recent scientific debate. Research has compared the conditions under which sarsens and puddingstones may have been formed with the present day climate in the Kalahari Desert and parts of Australia.

The puddingstone boulder at Ugley Green. Photo: G. Lucy

2. Hall's Quarry SSSI, Site of Special Scientific Interest, TL519280

Site name: Hall's Quarry SSSI

Grid reference: TL 519 280

Brief description of site:

Hall's Quarry SSSI (also known as Ugley Park Quarry) has exposures of glacial gravels and boulder clay (till) related to the Anglian glaciation, 450,000 years ago, the coldest period of the Ice Age when an ice sheet reached as far as south Essex. The Site of Special Scientific Interest (SSSI) relates to two representative sections in the northern part of the pit.

Details

Halls Quarry has exposures of glacial gravels, silts and boulder clay relating to the Anglian glaciation. It is important for demonstrating the stratigraphical relationship of the glacial deposits and meltwater deposits and for correlating these with the river sequences in the Thames catchment. The gravels at Ugley Quarry are unusually rich in non-durable, local and far-travelled material indicating that they were deposited very close to the edge of the ice.

The complex sequence of sands, gravels and boulder clay at this quarry shows that, during the Anglian cold stage (450,000 years ago), the Thames catchment was repeatedly invaded by ice from the north or north-west. The evidence from Ugley is critical in demonstrating that there were at least four of these ice advances, each one depositing a characteristic boulder clay.

The pit has been partly infilled. Two representative sections were intended to be maintained in the northern part of the pit.

There are several sarsen stones at the entrance to the quarry.

Site Description

This Ancient Woodland lost SSSI status when it was bisected by the construction of the M11 but is still one of the larger woodlands in the district. The site includes an area of secondary woodland to the south of the eastern section.

The canopy of the western section is made up primarily of Pedunculate Oak (*Quercus robur*) and Ash (*Fraxinus excelsior*) with Wild Cherry (*Prunus avium*), Silver Birch (*Betula pendula*) and Aspen (*Populus tremula*). Ash is dominant in places and some sections feature Hornbeam (*Carpinus betulus*) coppice. The understorey includes Hazel (*Corylus avellana*) and elm (*Ulmus* sp.).

The ground flora includes Bluebell (*Hyacinthoides non-scripta*), Enchanters'-nightshade (*Circaea lutetiana*), Bugle (*Ajuga reptans*), Wood Speedwell (*Veronica montana*), Three-nerved Sandwort (*Moehringia trinervia*), Creeping Jenny (*Lysimachia nummularia*), Wood-sedge (*Carex sylvatica*), Wavy Hair-grass (*Deschampsia flexuosa*), False Brome (*Brachypodium sylvaticum*), Male Fern (*Dryopteris filix-mas*), Broad Buckler-fern (*Dryopteris dilatata*) and the Essex Red Listed Lady Fern (*Athyrium filix-femina*) and Narrow-bucker Fern (*Dryopteris carthusiana*).

The eastern section consists of a more varied canopy with Scot's Pine (*Pinus sylvestris*), Field Maple (*Acer campestre*) and Beech (*Fagus sylvatica*) in addition to those species already mentioned. The understorey also includes Holly (*Ilex aquifolium*) and Goat Willow (*Salix caprea*).

The ground flora of the eastern half is similar to the western half, but also includes Remote Sedge (*Carex remota*), the Nationally Scarce Oxlip (*Primula elatior*) and the Essex Red List Borrer's Scaly Male-fern (*Dryopteris borreii*).

Site Selection Rationale

HC1 – The site is documented as Ancient Woodland and included in the Inventory as such.

HC2 – More recent woodland habitat to the south of the Ancient Wood is included as it supports an appropriate structure to be considered Priority Habitat.

Priority Habitats

Lowland Mixed Deciduous Woodland

Ownership and Access

The site is in private ownership with no public access but can be viewed from the public rights of way that border the Ancient Woodland sections.

Condition Statement

Moderate stable

Management Issues

There is little evidence that the site is under management for nature conservation outcomes and the eastern half shows evidence of heavy recreational use in places.

Review Schedule

Site selected: 1994 (W47)

Site Reviewed: 2007, minor addition; 2021, additional secondary woodland added.

Site reference: Ufd131

Site name: Lady Wood and Regent's Spring, Henham

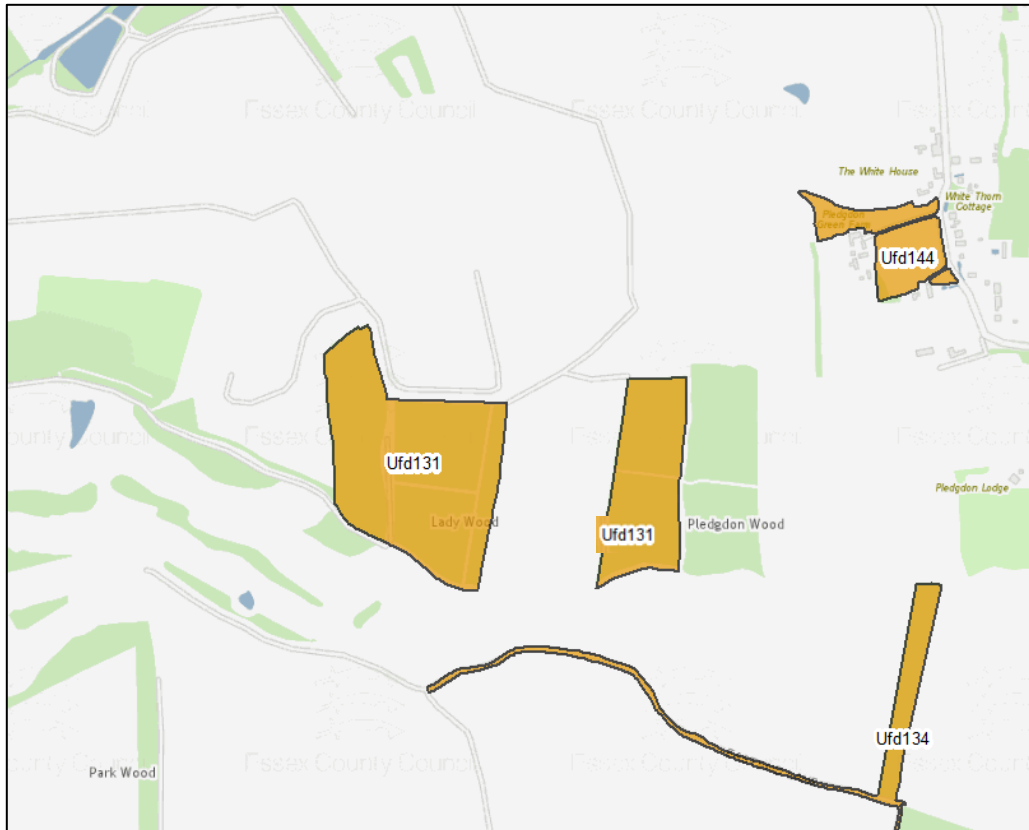

Grid ref. (approx. centre of site): TL556440

Site area: 11.7ha

LoWS Selection Criteria:

- HC2 – Lowland Mixed Deciduous Woodland on Non-Ancient Sites

Boundary Map

Reproduced by permission of Ordnance Survey® on behalf of the Controller of Her Majesty's Stationery Office. ©Crown Copyright. Licence number LA100019602

Site Description

This site is made up of the old linear woodland of Regent's Spring together with more recent woodland known as Lady Wood, part of which has been removed to leave two separate blocks. The eastern block is adjacent to Pledgdon Wood SSSI.

The eastern section consists of even-aged Pedunculate Oak (*Quercus robur*) with Ash (*Fraxinus excelsior*) Field Maple (*Acer campestre*) and Hazel (*Corylus avellana*) coppice. The development of its ground flora has benefited from the proximity of the Ancient Woodland to the east, and includes Dog's Mercury (*Mercurialis perennis*), Wood-sedge (*Carex sylvatica*), Hairy-brome (*Bromopsis ramosus*), False Brome (*Brachypodium sylvaticum*), Pendulous Sedge and the Essex Red List Greater Burnet-saxifrage (*Pimpinella major*). Early Purple Orchid (*Orchis mascula*), the Essex Red List Herb Paris (*Paris quadrifolia*) and the Nationally Scarce Oxlip (*Primula elatior*) are also understood to be present.

The western section is similar in composition with some Norway Spruce (*Picea abies*), Hornbeam (*Carpinus betulus*) and Hawthorn (*Crataegus monogyna*) but is more open in structure. Oxlip is also present here, together with Pignut (*Conopodium majus*).

Site Selection Rationale

HC2 – Although Regent's Spring has been wooded since the beginning of the 19th Century, there is no evidence that is Ancient, and the rest of the site is known to have been planted at the beginning of the 20th Century.

Priority Habitats

Lowland Mixed Deciduous Woodland

Ownership and Access

The site is in private ownership with no public access but can be viewed from

Condition Statement

Moderate, stable

Management Issues

The site is not under management for nature conservation outcomes and has been extensively damaged by deer browsing.

Review Schedule

Site selected: 1994 (W72)

Site Reviewed: 2007, Regent's Spring added; 2021, no change.

Site reference: Ufd134

Site name: Eastend Lane, Elsenham

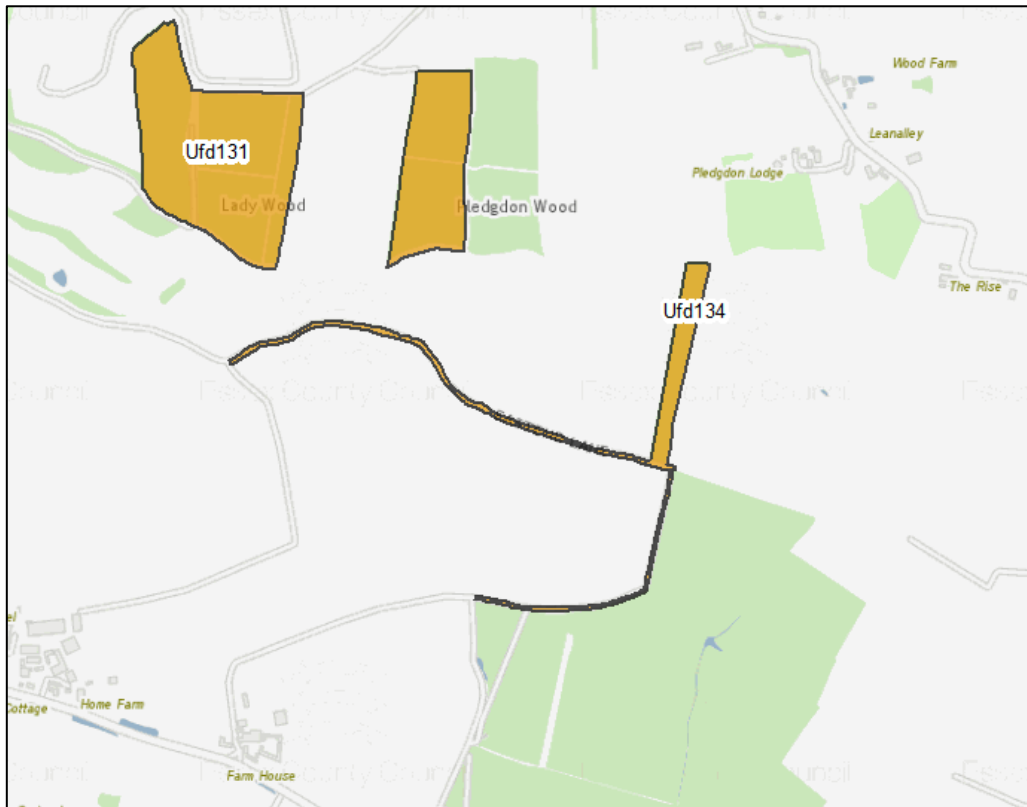

Grid ref. (approx. centre of site): TL554151

Site area: 2.2ha

LoWS Selection Criteria:

- HC2 – Lowland Mixed Deciduous Woodland on Non-Ancient Sites
- HC8 – Hedgerows and Green Lanes
- HC9 – Lowland Meadows

Boundary Map

Reproduced by permission of Ordnance Survey® on behalf of the Controller of Her Majesty's Stationery Office. ©Crown Copyright. Licence number LA100019602

Site Description

This site consists of an old lane that in part runs adjacent to the Eastend Wood SSSI together with a linear grove of recent woodland. The section of lane running west from Eastend Wood is designated for the calcareous neutral grassland habitat it supports together with its ecological connectivity function. The section adjacent to Eastend Wood is selected as an extension to the SSSI woodland habitat.

The grassland in the more open section of lane supports the Nationally Scarce Sulphur Clover (*Trifolium ochroleucon*) together with the Essex Red List Common Rockrose (*Helianthemum nummularium*) and Greater Burnet-saxifrage (*Pimpinella major*). Other species present include Red Fescue (*Festuca rubra*) and Smaller Cat's-tail (*Phleum bertolonii*) with Common Restharrow (*Ononis repens*), Wild Basil (*Clinopodium vulgare*), Lady's Bedstraw (*Galium verum*), Common Knapweed (*Centaurea nigra*), Agrimony (*Agrimonia eupatorium*), Field Scabious (*Knautia arvensis*), Meadow Vetchling (*Lathyrus pratensis*), Autumn Hawkbit (*Scorzoneroides autumnalis*), Red Bartsia (*Odontites vernus*) and Meadowsweet (*Filipendula ulmaria*).

The hedges on either side of the lane include Pedunculate Oak (*Quercus robur*), Hawthorn (*Crataegus monogyna*), Blackthorn (*Prunus spinosa*), Hazel (*Corylus avellana*), Field Maple (*Acer campestre*), Dogwood (*Cornus sanguineus*) and Goat Willow (*Salix caprea*).

Adjacent to Eastend Wood SSSI, the lane supports typical woodland ground flora including Creeping Jenny (*Lysimachia nummularia*), Dog's Mercury (*Mercurialis perennis*), Enchanter's-nightshade (*Circaea lutetiana*), Hairy-brome (*Bromopsis ramosus*), Tufted Hair-grass (*Deschampsia cespitosa*), False Brome (*Brachypodium sylvaticum*) and Remote Sedge (*Carex remota*).

The grove of more recent woodland dates from the early 20th Century and consists of Pedunculate Oak and

Hazel with Dog's Mercury, Hairy-brome and False Brome. It provides additional connectivity from the SSSI into the surrounding countryside.

Site Selection Rationale

HC2 – The grove to the north of the lane is recent, but supports woodland habitat that meets the Priority Habitat description

HC8 – The lane is old and serves an ecological function linking SSSI woodland to other nearby woodland sites, as well as providing value in its own right

HC9 - Although chalk grassland indicators are present, the site is on chalky boulder clay and so cannot be considered as true Lowland Calcareous Grassland. It is better considered as a base-rich sub-community of the MG5 circumneutral hay meadow community, which qualifies it as Lowland Meadow Priority Habitat.

Priority Habitats

Hedgerows

Lowland Meadows

Lowland Mixed Deciduous Woodland

Ownership and Access

The site is a public right of way, but the land is in private ownership.

Condition Statement

Moderate, stable

Management Issues

The site is not under management for nature conservation outcomes

Review Schedule

Site selected: 2007

Site Reviewed: 2021, extended to include lane adjacent to Eastend Wood and recent Priority Habitat woodland

Site reference: Ufd144

Site name: Pledgon Green, Henham

Grid ref. (approx. centre of site): TL562318

Site area: 2.1ha

LoWS Selection Criteria:

- HC9 Lowland Meadows

Boundary Map

Reproduced by permission of Ordnance Survey® on behalf of the Controller of Her Majesty's Stationery Office. ©Crown Copyright. Licence number LA100019602

Site Description

This old grassland site is registered Common Land and supports a diverse flora. The sward includes Creeping Bent (*Agrostis stolonifera*), Meadow Foxtail (*Alopecurus pratensis*), Sweet Vernal-grass (*Anthoxanthum odoratum*) and Red Fescue (*Festuca rubra*) with Common Knapweed (*Centaurea nigra*), Agrimony (*Agrimonia eupatoria*), Common Bird's-foot-trefoil (*Lotus corniculatus*), Lady's Bedstraw (*Galium verum*), Burnet Saxifrage (*Pimpinella saxifraga*), Cowslip (*Primula veris*), Meadow Buttercup (*Ranunculus acris*), Hoary Plantain (*Plantago media*) and the Nationally Scarce Sulphur Clover (*Trifolium ochroleucon*).

Site Selection Rationale

HC9 – This chalky boulder clay grassland is a base-rich example of the MG5 circumneutral hay meadow community, which qualifies it as Lowland Meadows Priority Habitat.

Priority Habitats

Lowland Meadows

Ownership and Access

The site is in private ownership with no public access but can be viewed from

Condition Statement

Moderate, stable

Management Issues

The site is not under management for nature conservation outcomes and is generally cut too early in the year, but this is sufficient to maintain its overall character.

Review Schedule

Site selected: 1994 (G64)

Site Reviewed: 2021, no change

Site reference: Ufd153

Site name: Hawland Wood, Chickney

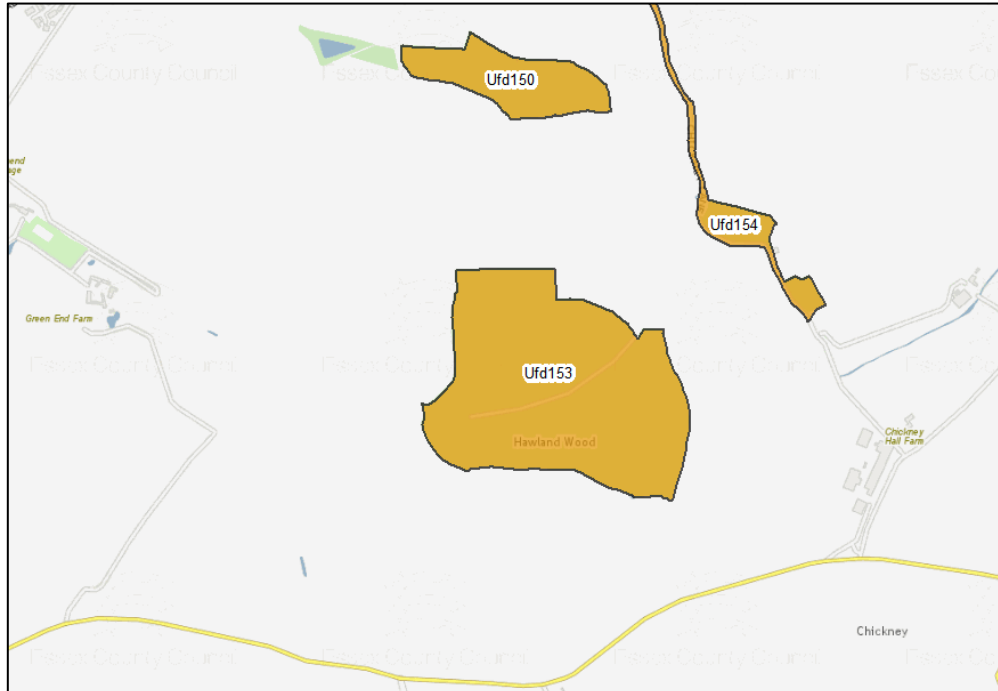

Grid ref. (approx. centre of site): TL564197

Site area: 14.9ha

LoWS Selection Criteria:

- HC1 – Ancient Woodland Sites
- HC2 – Lowland Mixed Deciduous Woodland on Non-Ancient Sites

Boundary Map

Reproduced by permission of Ordnance Survey® on behalf of the Controller of Her Majesty's Stationery Office. ©Crown Copyright. Licence number LA100019602

Site Description

This site is part of the much larger Duds Wood shown on 18th Century maps, and the southern half appears to be Ancient. Whiteland Spring on the northern edge is old, but not Ancient woodland and the woodland between that and the track is more recent.

The canopy consists of Pedunculate Oak (*Quercus robur*) and Ash (*Fraxinus excelsior*) with some elm (*Ulmus* sp.) and the understorey includes Field Maple (*Acer campestre*), Hazel (*Corylus avellana*), Hornbeam (*Carpinus betulus*) coppice and Hawthorn (*Crataegus monogyna*).

The ground flora is diverse and includes Bluebell (*Hyacinthoides non-scripta*), Dog's Mercury (*Mercurialis perennis*), Wood Speedwell (*Veronica montana*), Wood Sorrel (*Oxalis acetosella*), Yellow Archangel (*Lamium galeobdolon*), Three-nerved Sandwort (*Moehringia trinervia*), Redcurrant (*Ribes rubrum*), Wood Avens (*Geum urbanum*), Enchanter's-nightshade (*Circaea lutetiana*), Wood Melick (*Melica uniflora*), Wood Millet (*Milium effusum*), Hairy-brome (*Bromopsis ramosus*), Tufted Hair-grass (*Deschampsia cespitosa*), False Brome (*Brachypodium sylvaticum*), Remote Sedge (*Carex remota*), Pendulous Sedge (*Carex pendula*) and Male-fern (*Dryopteris filix-mas*). The Essex Red List Herb Paris (*Paris quadrifolia*) and Woodruff (*Galium odoratum*) are also present, together with the Nationally Scarce Oxlip (*Primula elatior*).

In damper parts of the rides, Creeping-Jenny (*Lysimachia nummularia*) and Marsh Bedstraw (*Galium palustre*) are present.

Site Selection Rationale

HC1 – The southern part of Hawland Wood is believed to be Ancient Woodland, which is supported by map evidence and the presence of indicator species.

HC2 – Although shown as Ancient Woodland in the Inventory, the northern part of Hawland Wood was not wooded in the mid-19th Century, but it does meet the requirements of Priority woodland habitat. Whiteland Spring is old, established woodland

Priority Habitats

Lowland Mixed Deciduous Woodland

Ownership and Access

The site is in private ownership with no public access but can be viewed from a public right of way through the middle of the wood.

Condition Statement

Moderate, stable

Management Issues

There is no evidence of any recent management in this site.

Review Schedule

Site selected: 1994 (W87)

Site Reviewed: 2021, Whiteland Spring added.

Site reference: Ufd154

Site name: Chickney Lane, Chickney

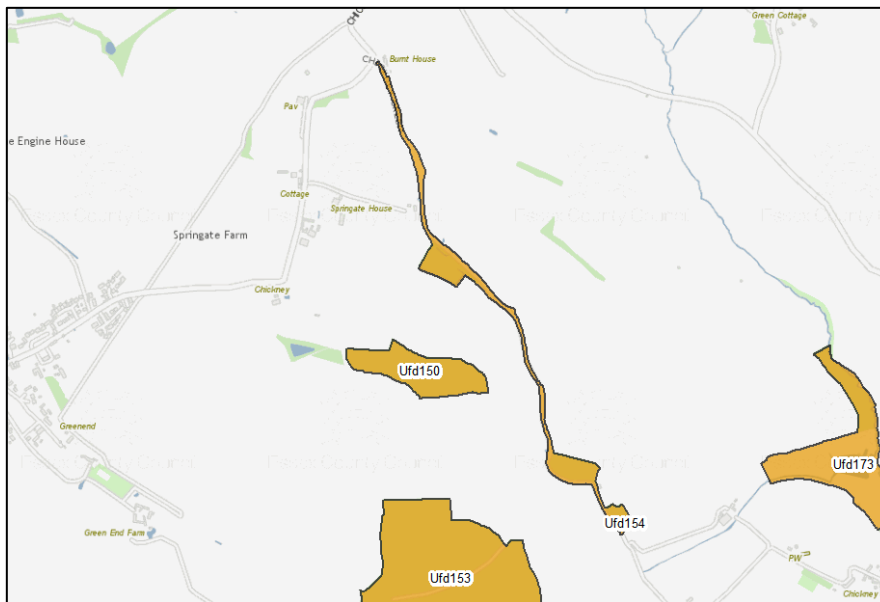

Grid ref. (approx. centre of site): TL565286

Site area: 3.7ha

LoWS Selection Criteria:

- HC8 – Hedgerows and Green Lanes

Boundary Map

Reproduced by permission of Ordnance Survey® on behalf of the Controller of Her Majesty's Stationery Office. ©Crown Copyright. Licence number LA100019602

Site Description

This ancient lane consists of mature hedgerows, patches of grassland and associated woodland habitat, including bits of Bush Spring, which is demonstrably old.

The hedgerows are made up of Hawthorn (*Crataegus monogyna*) and Blackthorn (*Prunus spinosa*) with Field Maple (*Acer campestre*) and occasional Pedunculate Oak (*Quercus robur*), Ash (*Fraxinus excelsior*), Guelder-rose (*Viburnum opulus*), Wild Privet (*Ligustrum vulgare*) and Dogwood (*Cornus sanguineus*).

Woodland ground flora includes Hairy-brome (*Bromopsis ramosus*), Bearded Couch (*Elymus caninus*), False-brome (*Brachypodium sylvaticum*), Pendulous Sedge (*Carex pendula*) and Hairy St John's-wort (*Hypericum hirsutum*). Grassland species include Wild Basil (*Clinopodium vulgare*), Common Knapweed (*Centaurea nigra*), Agrimony (*Agrimonia eupatoria*), Meadow Vetchling (*Lathyrus pratensis*), Tufted Vetch (*Vicia cracca*) and Smaller Cat's-tail (*Phleum bertolonii*).

Bush Spring has a canopy of Pedunculate Oak, with Hornbeam (*Carpinus betulus*), elm (*Ulmus* sp.), Hawthorn, Hazel (*Corylus avellana*), Wild Cherry (*Prunus avium*), Field Maple, Ash and Buckthorn (*Rhamnus cathartica*). The ground flora includes Dog's Mercury (*Mercurialis perennis*), Wood Avens (*Geum urbanum*), False-brome and Wood-sedge (*Carex sylvatica*).

Site Selection Rationale

HC8 - The lane is ancient in origin and as well as supporting ecological connectivity through the landscape has its own intrinsic value.

Priority Habitats

Hedgerows
Lowland Mixed Deciduous Woodland

Ownership and Access

The site is predominantly a public right of way, although some of the land included is in private ownership.

Condition Statement

Moderate, stable

Management Issues

The site is not under management for nature conservation outcomes.

Review Schedule

Site selected: 1994 (W88)

Site Reviewed: 2021, minor addition of woodland habitat.

Site reference: Ufd300

Site name: Mill Wood, Elsenham

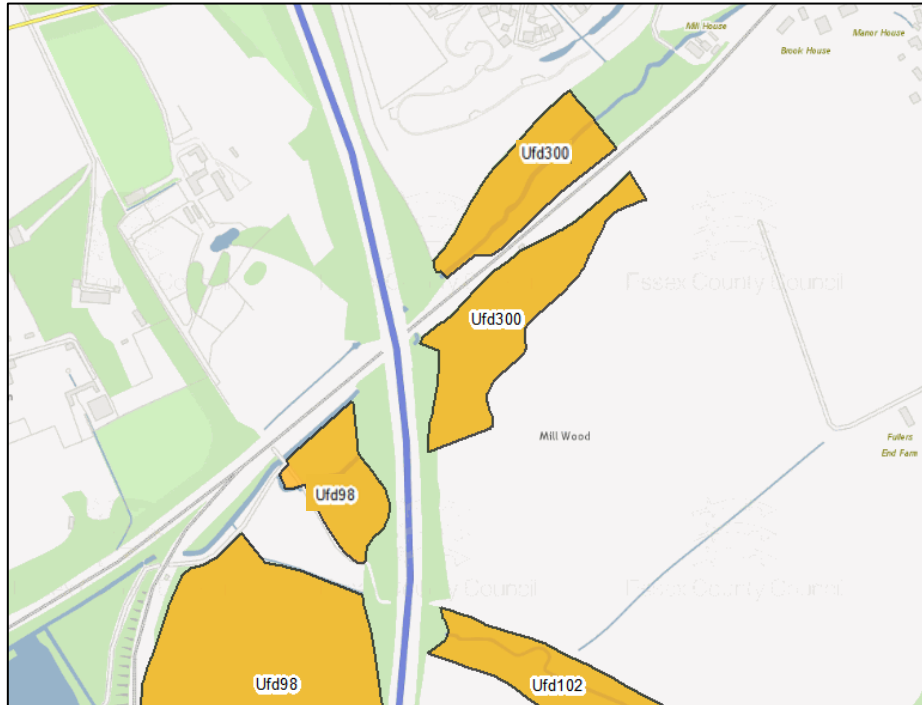

Grid ref. (approx. centre of site): TL531255

Site area: 3.3ha

LoWS Selection Criteria:

- HC2 – Lowland Mixed Deciduous Woodland on Non-ancient Sites
- HC28 – Small-component Mosaics

Boundary Map

Reproduced by permission of Ordnance Survey® on behalf of the Controller of Her Majesty's Stationery Office. ©Crown Copyright. Licence number LA100019602

Site Description

This site is split by the mainline railway between London and Cambridge and is based upon the old woodland of Mill Wood. To the south of the railway line is old, possibly ancient woodland, while to the north is some streamside woodland alongside Stansted Brook that was once part of the same block. To the north of the brook is an open area of wet grassland and tall herb vegetation.

Mill Wood to the south of the railway line lies on a steep slope, which is unlikely to ever have been cleared for agriculture. The canopy consists of Pedunculate Oak (*Quercus robur*), Ash (*Fraxinus excelsior*) and Sweet Chestnut (*Castanea sativa*) with Silver Birch (*Betula pendula*). The understorey includes Hornbeam (*Carpinus betulus*), and Hazel (*Corylus avellana*) coppice, with elm (*Ulmus* sp.), Field Maple (*Acer campestre*) and Hawthorn (*Crataegus monogyna*). The ground flora includes Bluebell (*Hyacinthoides non-scripta*), Bracken (*Pteridium aquilinum*), Male-fern (*Dryopteris filix-mas*) and Pendulous Sedge (*Carex pendula*).

To the north of the railway, the woodland along the stream includes Pedunculate Oak, Ash and Alder (*Alnus glutinosa*), with Hazel and Hawthorn. The ground flora includes Dog's Mercury (*Mercurialis perennis*) and False Brome (*Brachypodium sylvaticum*).

The open ground is dominated by Common Nettle (*Urtica dioica*), Bramble (*Rubus fruticosus* agg.), Raspberry (*Rubus idaeus*) with stands of thistles (*Cirsium* spp.) and patches of Meadowsweet (*Filipendula ulmaria*) and comfrey (*Symphytum* sp.).

Site Selection Rationale

HC2 – Although not included in the Ancient Woodland Inventory, the community present is clearly old and supports an appropriate species mix and structure to be considered as Priority Habitat woodland.

HC28 – This criterion is used to define the extent of the site taking in the other habitats identified as of value to biodiversity but that do not meet the thresholds for individual criteria.

Priority Habitats

Lowland Mixed Deciduous Woodland

Ownership and Access

The site is in private ownership with no public access but can be viewed from public rights of way along its northern boundary and beyond the southern boundary.

Condition Statement

Moderate, stable/declining

Management Issues

There is no evidence of any management for nature conservation outcomes. While the woodland habitat is robust and stable, the open habitats to the north are becoming dominated by scrub and tall ruderal species.

Review Schedule

Site selected: 2021

Important Invertebrate Areas in planning

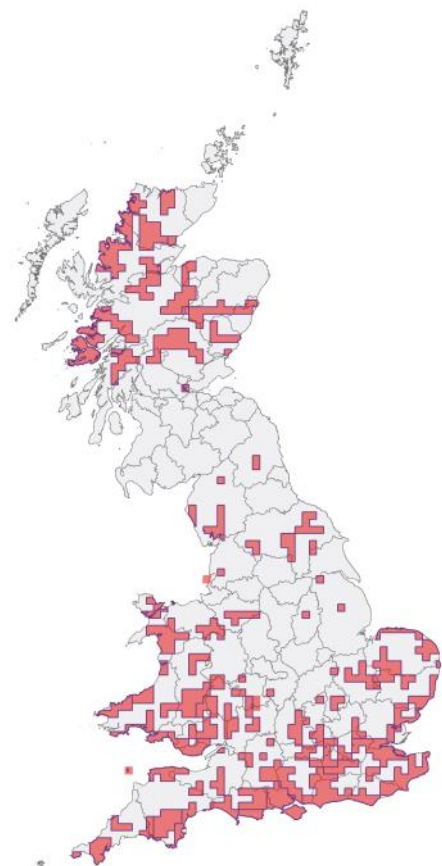

Left: Gregynog National Nature Reserve in the Montgomeryshire IIA © John Trefonen. Right: Scolt Head in the Norfolk Coast IIA © John Fielding Aerial Image

Important Invertebrate Areas (IIAs) are nationally or internationally significant places for invertebrates and their habitats. They are a vital tool to help conserve our most threatened species and assemblages of invertebrates, mapped using data from national and local recorders and developed in consultation with local experts. Although not a legal site designation, they can help to ensure that key sites for invertebrates are considered in local and national planning and land management decision making, to help restore sustainable populations of invertebrates. This can include informing site-specific planning decisions, but also strategic decisions about conservation priorities at the landscape scale.

How can IIAs help invertebrates in planning?

With thousands of species and different ecological requirements and ranges, considering invertebrates is a complex matter. IIAs take technical information and distil it into accessible and useful format to ensure that ecologists, planners, local authorities, statutory bodies, conservation organisations, land managers and other decision makers are able to better understand the importance of the landscape for invertebrates and make more informed decisions to support nature's recovery. Completed IIA maps and profiles will enable:

- Important wildlife sites to be flagged up at the earliest opportunity within planning processes, including in Environmental Impact Assessments;
- Better planning outcomes for invertebrates, by identifying when invertebrate surveys are needed to assess impacts and properly inform planning decisions;

Map of national IIA hectads (10km x 10km squares)

- Local Authorities to better recognise sites and habitats that are important for nationally rare and threatened invertebrates. This is particularly relevant for Local Authorities which don't have access to ecological expertise to support their planning teams;
- Local Environmental Records Centres to share a nationally prioritised series of maps showing key invertebrate interest, informative profiles and accompanying resources to support their data search outputs;
- Better identification of important sites for invertebrates, that can identify gaps in the national protected area network and contribute to each county's Local Wildlife Site (or equivalent) series;
- The very best sites for invertebrates to be excluded from Local Development Plans, ensuring that they are not put at risk of inappropriate land use changes or development. This will help Local Authorities to fulfil their biodiversity duty;
- Green and Blue Infrastructure plans to properly consider how they could support invertebrate populations by protecting, restoring or connecting habitat with targeted creation;
- Ecological consultants and professionals to more easily recognise key invertebrate sites, habitats and features, allowing for better impact assessments to be undertaken.

IAs can help highlight where additional invertebrate expertise is required, but are not a replacement for expert survey and assessment. A complete network of fine-scale maps, supporting profiles and documents to help the use of IAs to inform decision making will be produced and made available through the Buglife website. For more information and updates visit: <https://www.buglife.org.uk/our-work/important-invertebrate-areas/>

How were IAs identified and mapped?

The network of IAs was identified using a wealth of data - over 45 million records from 80 national expert recording schemes. Modern status reviews of invertebrate threat and rarity, alongside expert opinion, were used to identify a suite of IIA qualifying species. Nationally, a hectad (10km x 10km square) qualifies as part of an IIA if it:

- Supports a species that is Critically Endangered nationally, Endangered at the global or European level, or a range restricted endemic species. These are our rarest and most threatened species, meaning there is a special responsibility to act and conserve them.

or

- Supports a nationally important assemblage of rare or threatened species.

These hectads were then grouped into recognisable named IIA areas such as the New Forest, South Wales Valleys or Strathspey. Fine-scale mapping of these named IIA areas was then undertaken, to identify the networks of habitats and sites that support their key invertebrate interest. For large and complex IAs, this used Local Environmental Records Centre data merged with the national data to create maps of qualifying species records that were scrutinised by local entomologists and naturalists.

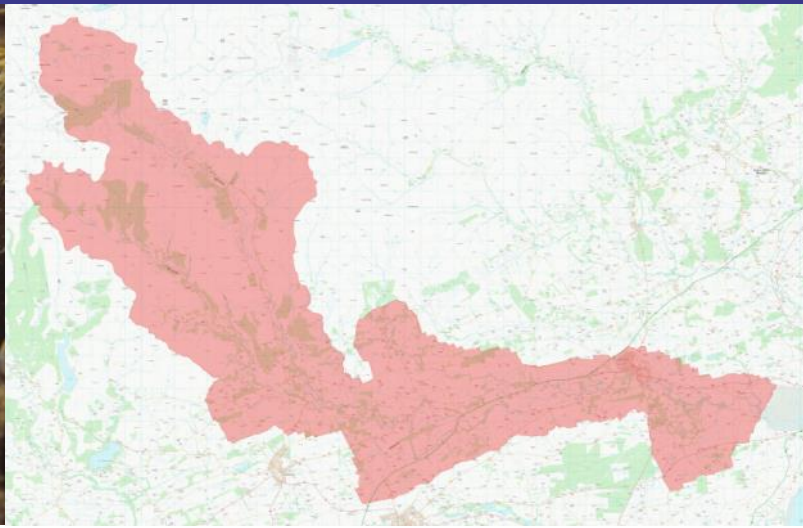

What do IIA maps and profiles show?

The IIA maps show the network of sites that support its qualifying species. This network is mapped based on the presence of verified post-1990 records of IIA qualifying species and the judgement of local experts to tease out the areas of habitat that support them.

The IIA maps do not show individual species records as the data comes from multiple sources and involve different

Left: Part of the fine-scale Mid Cornwall IIA network, north of the River Fowey. Right: The Nationally Rare Blue Ground Beetle (*Carabus intricatus*) - a qualifying species found in Fowey Valley woodlands.

permissions. To be best interpreted, they should be viewed alongside the relevant IIA profiles, which can be downloaded from the IIA webpage. These profiles describe the important habitats and features supporting invertebrates within each IIA. They also identify some key species to consider and assemblages of invertebrates in that area associated with specific habitat features. The information on threats and opportunities within the profile can be used to inform management decisions for habitats within the mapped IIA area.

The IIA programme is ambitious and takes time, meaning that some IIAs have yet to be fine-scale mapped, while others have been fine-scale mapped but don't yet have a supporting profile. Please bear with us while we undertake this significant task and keep checking the [IIA webmap](#) for updates to the network of fine-scale maps and accompanying profiles.

Further invertebrate considerations

- Areas outside of the fine-scale IIA map network can still be valuable for invertebrates. Habitats identified in ecological appraisals as having the potential to support important invertebrate populations should always be subject to appropriate invertebrate survey and assessment.
- All planning applications should undertake the appropriate data searches with Local Environmental Records Centres. IIA profiles can help to identify important habitat types, but it is essential that, where required, appropriate invertebrate surveys and assessments are always undertaken. These should be undertaken by a competent expert, using

appropriate survey techniques and must cover the relevant survey window.

- IIA profiles identify important habitat that can inform locally relevant habitat creation, management or restoration plans so that they properly target the invertebrate assemblages of interest. Targeting habitat improvements and creation within or adjacent to fine-scale IIA areas can improve connectivity across the landscape, allowing invertebrate populations to expand and create resilient populations.
